Simulation Technologies in Networking and Communications Al-Sakib Khan Pathan, Muhammad Mostafa Monowar, Shafiullah Khan, 2014-11-06 Simulation is a widely used mechanism for validating the theoretical model of networking or communication systems Although the claims made based on simulations are considered to be reliable how reliable they really are is best determined with real world implementation trials This book addresses various issues covering different mechanisms related to simulation technologies in networking and communications fields Focusing on the practice of simulation testing instead of the theory it reviews and evaluates popular simulation modeling tools and recommends the best tools for specific tests

Analytical Modeling of Medium Access Control Protocols in Wireless Networks Marcelo

Menezes Carvalho,2006 A new modeling framework is introduced for the analytical study of medium access control MAC protocols operating in multihop wireless ad hoc networks i e wireless networks characterized by the lack of any pre existent infrastructure and where participating devices must cooperatively provide the basic functionalities that are common to any computer network The proposed modeling framework focuses on the interactions between the physical PHY and MAC layers and on the impact that each node has on the dynamics of every other node in the network To account for the effects of both cross layer interactions and the interference among all nodes a novel linear model is introduced with which topology and PHY MAC layer aspects are naturally incorporated in what we define as interference matrices A key feature of the model is that nodes can be modeled individually i e it allows a per node setup of many layer specific parameters Moreover no spatial probability distribution or special arrangement of nodes is assumed the model allows the computation of individual per node performance metrics for any given network topology and radio channel model *Algorithms and Protocols for Wireless and Mobile Ad Hoc Networks* Azzedine Boukerche,2009 Focuses on several aspects of wireless ad hoc networks particularly algorithmic methods and distributed computing with mobility and computation capability This book provides the crucial building foundation for the design and construction of the future generation of ad hoc networks Multiantenna Wireless Communications Systems Sergio Barbarossa,2005 Antenna diversity has become of critical importance in today s mobile communications systems and this groundbreaking book offers you new approaches to designing transmission strategies for multi antenna systems With these novel and practical design strategies you can develop transmission systems that efficiently use available power and bandwidth The book shows you how to design multi antenna transceivers in single antenna systems that can reduce transmission power while ensuring a specified quality level In addition you can design wireless networks that have a prescribed degree and probability of connectivity and fault tolerance *IEEE International Conference on Personal Wireless Communications ,2002* *Conference Proceedings ,2004* *Performance Analysis of Wireless Networks* Renato Mariz de Moraes,2005 In this thesis we investigate the performance of wireless ad hoc networks First we propose a multi copy relaying scheme for packets in mobile ad hoc networks MANETs which reduces the delivery delay without changing the throughput order We also present a method for computing the interference caused from other nodes Second we study the trade off among mobility capacity and delay for wireless ad hoc networks By considering nodes that are subject to restrained movements we found that mobility is an entity that can be exchanged with capacity and delay Furthermore the throughput delay trade off is investigated for nodes employing directional antennas and the results are compared with previous work Third we propose a new communication scheme based on collaboration among nodes where the transmission exchange of packets is concurrently possible by employing a many to many communication framework We present the principles of operation for such a technique followed by two practical examples of implementation using FDMA CDMA and FDMA MIMO systems Shannon capacity throughput and delay are computed and compared with related works *Stanford Bulletin ,2004*
