Principles of Concurrent and Distributed Programming M. Ben-Ari,2006 Principles of Concurrent and Distributed Programming provides an introduction to concurrent programming focusing on general principles and not on specific systems Software today is inherently concurrent or distributed from event based GUI designs to operating and real time systems to Internet applications This edition is an introduction to concurrency and examines the growing importance of concurrency constructs embedded in programming languages and of formal methods such as model checking [Elements of Robotics](#) Mordechai Ben-Ari,Francesco Mondada,2017-10-25 This open access book bridges the gap between playing with robots in school and studying robotics at the upper undergraduate and graduate levels to prepare for careers in industry and research Robotic algorithms are presented formally but using only mathematics known by high school and first year college students such as calculus matrices and probability Concepts and algorithms are explained through detailed diagrams and calculations Elements of Robotics presents an overview of different types of robots and the components used to build robots but focuses on robotic algorithms simple algorithms like odometry and feedback control as well as algorithms for advanced topics like localization mapping image processing machine learning and swarm robotics These algorithms are demonstrated in simplified contexts that enable detailed computations to be performed and feasible activities to be posed Students who study these simplified demonstrations will be well prepared for advanced study of robotics The algorithms are presented at a relatively abstract level not tied to any specific robot Instead a generic robot is defined that uses elements common to most educational robots differential drive with two motors proximity sensors and some method of displaying output to the user The theory is supplemented with over 100 activities most of which can be successfully implemented using inexpensive educational robots Activities that require more computation can be programmed on a computer Archives are available with suggested implementations for the Thymio robot and standalone programs in Python **The Semantic Web-ISWC ...** ,2005
