Ending Global Poverty Stephen C. Smith,2015-03-17 Over 800 million people suffer from chronic hunger and over ten million children die each year from preventable causes These may seem like overwhelming statistics but as Stephen Smith shows in this call to arms global poverty is something that we can and should solve within our lifetimes Ending Global Poverty explores the various traps that keep people mired in poverty traps like poor nutrition illiteracy lack of access to health care and others and presents eight keys to escaping these traps Smith gives readers the tools they need to help people overcome poverty and to determine what approaches are most effective in fighting it For example celebrities in commercials who encourage viewers to adopt a poor child really seem to care but will sending money to these organizations do the most good Smith explains how to make an informed decision Grass roots programs and organizations are helping people gain the capabilities they need to escape from poverty and this book highlights many of the most promising of these strategies in some of the poorest countries in the world explaining what they do and what makes them effective

The Development Economics Reader Giorgio Secondi,2008 This book draws together the most authoritative articles on development economics published in the past few years is aimed at undergraduate level and is suitable for students with little or no background in economics The main themes include poverty foreign aid agriculture and human capital and amongst those whose work appears cannot be counted Amartya Sen Jeffrey Sachs Jagdish Bhagwati Joseph Stiglitz Paul Romer Dani Rodrik William Easterly Robert Barro Kenneth Arrow Hernando de Soto Daron Acemoglu Muhammad Yunus Anne Krueger Abhijit Banerjee Esther Duflo Michael Kremer and Martin Feldstein The reader focuses on the most recent and up to date contributions to the field of development economics Instead of collecting classic contributions which are already available through many sources the articles chosen reflect recent developments in the discipline for instance in the area of geography and development and include contributions that address recent events the dramatic resurgence of a debt relief movement The Development Economics Reader should be an invaluable resource for all students of the discipline

Child Benefits Jane Waldfogel,2025-06-06 The United States has one of the highest child poverty rates among wealthy countries and stands out among its peers as the only country that does not offer a child benefit regular payments from the government to most or all families with children not conditioned on parental employment During the temporary expansion of the Child Tax Credit CTC in 2021 the CTC functioned as a child benefit and the child poverty rate fell to the lowest level ever recorded in the United

States Despite this decrease the CTC expansion was not renewed Concerns about enacting a child benefit include the cost the possibility of misuse of money by parents and how it might affect parental employment and fertility In *Child Benefits* social policy scholar Jane Waldfogel details the history and origins of child benefits around the world and comprehensively assesses how child benefits affect family spending fertility employment child poverty and child wellbeing to address such concerns and to determine the benefits of enacting such a policy permanently Drawing on research from peer countries in the Organization for Economic Cooperation and Development as well as the United States Waldfogel shows that a child benefit would prevent poverty and hardship and protect children from deep poverty and income instability The research is clear that families would spend the money from a child benefit on food clothing and other items for their children and that a child benefit would not have large negative impacts on parental employment or family decisions about fertility It also shows that a child benefit would promote short and longer term child and family wellbeing Child benefits have been shown to enhance opportunity and benefit society through healthier and better educated young adults and stronger and more stable families And rigorous benefit cost analyses indicate that a child benefit while costly would more than pay for itself yielding a large return on investment Waldfogel evaluates four current major proposals for a child benefit and provides recommendations for a policy that would deliver the best outcomes for children and families and the best return on investment She argues that such a policy would be more generous not tied to parental employment or earnings available to all parents but phased out for higher income families delivered in monthly payments through the tax system and provided in addition to existing social programs *Child Benefits* provides fascinating insights on the history and impacts of child benefits and makes a clear and definitive argument for the establishment of a child benefit in the United States

Cheng, 2020-05-27 This book brings together perspectives of development economics and law to tackle the relationship between competition law enforcement and economic development It addresses the question of whether and how competition law enforcement helps to promote economic growth and development This question is highly pertinent for developing countries largely because many developing countries have only adopted competition law in recent years about thirty jurisdictions had in place a competition law in the early 1980s and there are now more than 130 competition law regimes across the world of which many are developing countries The book proposes a customized approach to competition law enforcement for developing countries set against the background of the academic and policy debate concerning convergence of competition law The implicit premise of convergence is that there may exist one or a few correct approaches to competition law enforcement which in most cases emanate from developed jurisdictions that are applicable to all This book rejects this assumption and argues that developing countries ought to tailor competition law enforcement to their own economic and political circumstances In particular it suggests how competition law enforcement can better incorporate development concerns without causing undue dilution of its traditional focus on protecting consumer welfare It proposes ways in which approaches to competition law enforcement

need to be adjusted to reflect the special economic characteristics of developing country economies and the more limited enforcement capacity of developing country competition authorities Finally it also addresses the long running debate concerning the desirability and viability of industrial policy for developing countries The author would like to acknowledge the Research Grants Council of Hong Kong for its generous support The work in this book was fully supported by a grant from the Research Grants Council of Hong Kong Project No HKU 742412H **Journal of Peace Research** ,2010-11
