Approximation Theory Eight C. K. Chui, Larry L. Schumaker, 1995 This is the collection of the refereed and edited papers presented at the 8th Texas International Conference on Approximation Theory It is interdisciplinary in nature and consists of two volumes The central theme of Vol I is the core of approximation theory It includes such important areas as qualitative approximations interpolation theory rational approximations radial basis functions and splines The second volume focuses on topics related to wavelet analysis including multiresolution and multi level approximation subdivision schemes in CAGD and applications

Adaptive Numerical Solution of PDEs Peter Deuffhard, Martin Weiser, 2012-08-31 This book deals with the general topic Numerical solution of partial differential equations PDEs with a focus on adaptivity of discretizations in space and time By and large introductory textbooks like Numerical Analysis in Modern Scientific Computing by Deuffhard and Hohmann should suffice as a prerequisite The emphasis lies on elliptic and parabolic systems Hyperbolic conservation laws are treated only on an elementary level excluding turbulence Numerical Analysis is clearly understood as part of Scientific Computing The focus is on the efficiency of algorithms i e speed reliability and robustness which directly leads to the concept of adaptivity in algorithms The theoretical derivation and analysis is kept as elementary as possible Nevertheless required somewhat more sophisticated mathematical theory is summarized in comprehensive form in an appendix Complex relations are explained by numerous figures and illustrating examples Non trivial problems from regenerative energy nanotechnology surgery and physiology are inserted The text will appeal to graduate students and researchers on the job in mathematics science and technology Conceptually it has been written as a textbook including exercises and a software list but at the same time it should be well suited for self study

Energetics of Geological Processes H. Annersten, S. K. Saxena, O. Stephansson, S. Bhattacharji, 2012-12-06 Hans Ramberg is working in an area of

geology where 60 years are a short often negligible period of time This is not so in the lives of men For us it is a time for evaluating past accomplishments and a time for friends to express their appreciation and admiration Some universities have become famous for this ability to foster eminent scientists in one or several fields The success of Cambridge University in physics is a well known example but if we ask ourselves whether the success of Oslo University in earth sciences is not equally astonishing then we see that Hans is yet another example of this process but it is not the whole story There were certainly promising prospects when he started his studies in geology V M Goldschmidt had just come back from Göttingen in Germany and Tom Barth had returned from the Geophysical Laboratory in Washington D C Two leaders in geochemistry and petrology at the same time Hans became a student of Barth specializing in metamorphic rocks and their problems but soon the situation changed Norway was occupied by the Germans and the possibilities for university studies almost vanished However in spite of all difficulties he obtained his Ph D in 1946 and began participating in the geological mapping of Greenland In 1947 he went to the University of Chicago and stayed there until 1961 when he came to his present position in the University of Uppsala Sweden
