*Digital Signal Processing with Examples in MATLAB* Samuel D. Stearns, 2003 In a field as rapidly expanding as digital signal processing even the topics relevant to the basics change over time both in their nature and their relative importance It is important therefore to have an up to date text that not only covers the fundamentals but that also follows a logical development that leaves no gaps readers must somehow bridge by themselves Digital Signal Processing with Examples in MATLAB is just such a text The presentation does not focus on DSP in isolation but relates it to continuous signal processing and treats digital signals as samples of physical phenomena The author also takes care to introduce important topics not usually addressed in signal processing texts including the discrete cosine and wavelet transforms multirate signal processing signal coding and compression least

squares systems design and adaptive signal processing He also uses the industry standard software MATLAB to provide examples of signal processing system design spectral analysis filtering coding and compression and exercise solutions All of the examples and functions used in the text are available online at [www.crcpress.com](http://www.crcpress.com) Designed for a one semester upper level course but also ideal for self study and reference Digital Signal Processing with Examples in MATLAB is complete self contained and rigorous For basic DSP it is quite simply the only book you need
