Make: Maverick Scientist Forrest M. Mims, 2024-02-14 Maverick Scientist is the memoir of Forrest Mims who forged a distinguished scientific career despite having no academic training in science Named one of the 50 Best Brains in Science by Discover magazine Forrest shares what sparked his childhood curiosity and relates a lifetime of improbable dramatic and occasionally outright dangerous experiences in the world of science At thirteen he invented a new method of rocket control At seventeen he designed and built an analog computer that could translate Russian into English and that the Smithsonian collected as an example of an early hobby computer While majoring in government at Texas A M University Forrest created a hand held radar like device to help guide the blind And during his military service he had to be given special clearance to do top secret laser research at the Air Force Weapons Lab Why Because while he lacked the required engineering degree they wanted his outside the box thinking on the project He went on to co found MITS Inc producer of the first commercially successful personal computer wrote a series of electronics books for Radio Shack that sold more than seven million copies and designed the music synthesizer circuit that became known as the infamous Atari Punk Console All this came before he

started consulting for NASA's Goddard Space Flight Center and NOAA's famous Mauna Loa Observatory and earning the prestigious Rolex Award. This intimate portrait of a self-made scientist shares a revelatory look inside the scientific community and tells the story of a lifelong learner who stood by his convictions even when pressured by the establishment to get in line with conventional wisdom. With dozens of personal photos and illustrations, *Maverick Scientist* serves as proof that to be a scientist you simply need to do science.

Makers at Work Steven Osborn, 2013-09-27 What do you get when you combine an electronics hobbyist, hacker, garage mechanic, kitchen table inventor, tinkerer, and entrepreneur? A maker, of course. Playful and creative makers are through expertise and experimentation creating art, products, and processes that change the way we think and interact with the world. As you'll see from the 21 interviews in *Makers at Work*, inquisitive makers are just as apt to pick up a laser cutter or an Arduino as a wrench to fashion something new. For example, you'll meet Jeri Ellsworth who might provide a video lecture on magnetic logic one day and a tutorial on welding a roll bar on a stock car the next. You'll also meet Eben Upton who put cheap, powerful computing in the hands of everyone with the Raspberry Pi, Becky Stern who jazzes up clothing with sensors and LEDs, and bunnies Huang who knows the ins and outs of the Shenzhen, China electronics parts markets as well as anyone. As all the interviews in *Makers at Work* show, makers have something in common: reverence for our technical past coupled with an aversion to convention. If they can't invent new processes or products, it's simply not worth doing. Crazy as it may seem, makers working in the spirit of Tesla, Wozniak, Edison, Gates, Musk, and many others can bring sophisticated products to the people or to the market as fast or faster than large corporations. And they are not just enabling new technologies; devices they are changing the way these devices are funded, manufactured, assembled, and delivered. *Makers at Work* puts a spotlight on the maker mindset and motivation of those who are reinventing the world, one object or idea at a time. You will meet the individuals who define what it means to be a maker. Learn about the tools and technologies driving the new industrial revolution. Discover ways to scale your weekend project into a profitable business. See how others have used crowdfunding to make their visions a reality. Learn how open source hardware and software is enabling whole new categories of products by removing barriers of entry for inventors. The new masters of the Makerverse ask two questions: Can it be done? Is it fun? As these interviews will show, the answer to both questions is: Let's find out.

Getting Started in Radio Astronomy Steven Arnold, 2013-09-24 Radio astronomy is a mystery to the majority of amateur astronomers, yet it is the best subject to turn to when desirous of an expanded knowledge of the sky. This guide intends to instruct complete newcomers to radio astronomy and provides help for the first steps on the road towards the study of this fascinating subject. In addition to a history of the science behind the pursuit, directions are included for four easy-to-build projects based around long-term NASA and Stanford Solar Center projects. The first three projects constitute self-contained units available as kits, so there is no need to hunt around for parts. The fourth, more advanced project encourages readers to do their own research and track down items. *Getting Started in Radio Astronomy* provides an overall introduction to listening in on the radio spectrum.

With details of equipment that really works a list of suppliers lists of online help forums and written by someone who has actually built and operated the tools described this book contains everything the newcomer to radio astronomy needs to get going **Popular Electronics** ,1980 **A Dictionary of Electronic Terms** Allied Radio Corporation,1968
