Distributed Network Systems Weijia Jia,Wanlei Zhou,2006-06-14 Both authors have taught the course of Distributed Systems for many years in the respective schools During the teaching we feel strongly that Distributed systems have evolved from traditional LAN based distributed

systems towards Internet based systems Although there exist many excellent textbooks on this topic because of the fast development of distributed systems and network programming protocols we have difficulty in finding an appropriate textbook for the course of distributed systems with orientation to the requirement of the undergraduate level study for today s distributed technology Specifically from to date concepts algorithms and models to implementations for both distributed system designs and application programming Thus the philosophy behind this book is to integrate the concepts algorithm designs and implementations of distributed systems based on network programming After using several materials of other textbooks and research books we found that many texts treat the distributed systems with separation of concepts algorithm design and network programming and it is very difficult for students to map the concepts of distributed systems to the algorithm design prototyping and implementations This book intends to enable readers especially postgraduates and senior undergraduate level to study up to date concepts algorithms and network programming skills for building modern distributed systems It enables students not only to master the concepts of distributed network system but also to readily use the material introduced into implementation practices

Web-Based Management of IP Networks and Systems Jean-Philippe Martin-Flatin,2003 Building on the author s extensive experience in industry and government agencies this book proposes a general framework for integrating the management of networked systems in the IP world The *Web based Integrated Management Architecture WIMA* leverages XML s self description capability to integrate SNMP data and CIM objects in a seamless manner The first part of the book begins with a detailed analysis of SNMP it highlights its strengths and weaknesses and justifies the need for object oriented information models such as CIM Next the author summarizes the different paradigms considered in management research and industry in the past decade compares the suitability of different middleware solutions and concludes that with current technologies Web based management makes a lot of technical sense and is not just trendy The second part goes into software engineering detail and discusses tradeoffs for organizing manager to agent communication In WIMA agents publish the monitoring data and notifications they can send and management applications managers subscribe to them in a semi or fully automated way The same publish subscribe paradigm is used for manager to manager communication when managers are organized hierarchically to manage a large domain or different domains We explain why this solution decreases network overhead and improves scalability Security issues are also investigated The third part of the book presents the high level design of JAMAP a research prototype that implements the main components of the WIMA architecture Its code is freely available and released under the GPL license This prototype is currently being ported to Web Services Finally the author compares WIMA with SNMP WBEM CIM and JMX and concludes that WBEM could evolve into WIMA in the future This book is primarily aimed at software architects and engineers who design and write management applications It should also be of interest to

Enjoying the Beat of Phrase: An Psychological Symphony within **Advanced Java Networking**

In a world used by monitors and the ceaseless chatter of immediate communication, the melodic splendor and psychological symphony produced by the published word often disappear in to the backdrop, eclipsed by the persistent sound and interruptions that permeate our lives. Nevertheless, nestled within the pages of **Advanced Java Networking** an enchanting literary prize filled with natural feelings, lies an immersive symphony waiting to be embraced. Constructed by a masterful composer of language, that interesting masterpiece conducts readers on an emotional trip, skillfully unraveling the concealed tunes and profound affect resonating within each cautiously constructed phrase.
