Current Trends In The Embryology Of Angiosperms:

Current Trends in the Embryology of Angiosperms Sant Saran Bhojwani, Woong-Young Soh, 2013-04-17 During the last two decades the modern techniques of histochemistry electron microscopy plant physiology biochemistry cell and molecular biology immunology and genetics have been applied to investigate the intricacies of the processes involved in embryo formation and considerable new information has been generated A better understanding of these processes has enhanced our capacity to manipulate fertilization and embryo development This has changed the face of the embryology of angiosperms from a descriptive science to an experimental and applied science The revolutionary progress made in this fascinating field of sexual reproduction was the motivation to prepare this volume It includes 21 chapters written by experts who have made substantial contributions to their respective fields It covers all aspects of the embryology of angiosperms ranging from development isolation and structure of male and female gametes their fusion in vivo and in vitro and structure physiology and genetics of zygotic embryogenesis to endosperm and seed development Advances in somatic embryogenesis synthetic seed technology and regeneration of haploid plants from male and female gametophytes are discussed Other important topics covered in this volume are sexual incompatibility parthenocarpy and apomixis The last chapter deals with the embryological perspective of inheritance of extra nuclear genes All the chapters contain up to date information and are profusely illustrated Graduate and postgraduate students teachers and scientists of botany and other areas of plant sciences will find this book extremely useful The Embryology of Angiosperm, 7e S S Bhojwani | S P Bhatnagar | P K Dantu, For the last 40 years this book has served well the students of Botany Agriculture and Forestry for their regular courses like BSc General and Hons and Msc as well as competitive examinations It has stood the test of time due to the authors zeal to update it regularly with inputs from latest developments in the field It explains all the important topics such as development and structure of male and female gametophytes pollination fertilization sexual incompatibility development of endosperm and embryo polyembryony apomixis and seed development It also describes embryology in relation to taxonomy and experimental and applied embryology **Plant Reproduction 2nd Ed** T. Pullaiah, K. Lakshminarayana, B. Hanumantha Rao, 2019-05-17 The present book is revised edition of our earlier book Embryology of Angiosperms and we retitled it as Plant Reproduction as per UGC syllabus In accordance with the title we introduced a chapter on Floral characters pollination mechanisms and vectors by Prof A Janaki Bai Department of Botany Andhra University Visakhapatnam and revised several other chapters This book brings together information on the widest range of topics in Plant Reproduction in a single source Written in a concise manner this book is ideally suitable to students and teachers of Colleges and Universities This fully illustrated book discusses plant reproduction in sufficient depth The text includes Development and structure of anther and male gametophyte palynology development and structure of female gametophyte pollination sexual incompatibility development of endosperm and embryo polyembryony and apomixis The text also includes chapters on embryology in relation to taxonomy and

experimental embryology Embryology of Flowering Plants: Terminology and Concepts, Vol. 2 T B Batygina, 2005-01-11
 This volume covers up to date notions of seed structure processes resulting to its formation syngamy triple fusion etc as well as of postseminal development seed dormancy and germination Great attention has been paid to the morphological and functional aspects of fertilization process and embryo and endospermogenesis **The Embryology of Angiosperms** C. R. Nagendran, M. S. Dinesh, 1989 **Double Fertilization** Val Raghavan, 2006-01-16 Double Fertilization provides a comprehensive overview of all aspects of this central event in the reproduction and development of flowering plants Written by Val Raghavan The Ohio State University an acknowledged expert in plant developmental biology the book vividly describes the molecular and cellular steps of the unique and complex fertilization process that culminates in the formation of embryo and endosperm focusing on the latest results from the model plant Arabidopsis The text is complemented by excellent illustrations including 16 color plates Since embryo and endosperm constitute the edible parts of many seeds and grains widely used in human and animal nutrition an understanding of the fertilization process has great relevance for genetic engineering aimed at improving the nutritional quality of crop plants This book is ideally suited to researchers and graduate students seeking a coherent view of current perspectives on embryogenesis and endosperm development in flowering plants Agrobiotechnology and Plant Tissue Culture Sant Saran Bhojwani, Woong-Young Soh, 2003 Plant tissue culture a fundamental technique of plant biotechnology has found varied applications in the plant industry and is a valuable laboratory technique This text for students and researchers explores the topic □□ □□ □, 2002 Australian Journal of Botany, 2010 Glimpses in Plant Research: Modern trend in plant taxonomy Parameswaran Krishnan Kutty Nair, Thomas Meprethu Varghese, 1973 Annual Review of Plant Physiology and Plant Molecular Biology, 1950 The Botanica, 2003 Acta Biologica Cracoviensia, 2001 **Apomixis** Elvira Hörandl, 2007 Apomixis asexual reproduction without fertilisation is no longer regarded as a blind alley of evolution but rather as an alternative mechanism to the predominant sexual pathway and that needs to be explored in many details to fully understand its role in nature **The New Volumes of the Encyclopædia Britannica**, 1902 The Journal of the Indian Botanical Society Indian Botanical Society, 2003 Yokohama Kokuritsu Daigaku Kyōiku Ningen Kagakubu kiyō, 2006 Plant Molecules Antonio Tiezzi, Annalisa Santucci, 2006 Journey of a Single Cell to a Plant S J Murch, Praveen K. Saxena, 2005 In plants the ability to regenerate identical individuals from single cells is the basis for modern agriculture These scientific advancements have given us virus free stocks novel germplasms clonal propagation systems and the commercial introduction of difficult to propagate plant species The timescale for breeding programs was dramatically reduced as plant tissue culture technologies were developed to shorten the time between generations and reduce the number of generations required for a line to be developed Without the capacity to regenerate plants it would not have been possible for plant biotechnology and genetic engineering to have advanced this far This book contains detailed reviews by the leading scientists who made these discoveries Acta Botanica
