

1. Answer the below question for the given scenarios.

*"A forest fire has broken out in a remote area, posing a threat to human lives and wildlife. Emergency response teams have deployed a rescue agent to assist in the rescue operations. The rescue agent analyzes the sensor data to assess the severity of the fire, identify areas of high heat intensity, and locate trapped or stranded individuals. The thermal cameras on the rescue agent help detect human presence in areas affected by smoke or low visibility. By analyzing the thermal signatures, the agent can pinpoint the location of individuals, even in challenging conditions. Using GPS data and mapping algorithms, the rescue agent plans the safest and most efficient routes for rescue teams to reach affected areas."*
