Event-Triggered Transmission Protocol in Robust Control Systems Niladri Sekhar Tripathy, Indra Narayan Kar, Kolin Paul, 2022-07-18 Controlling uncertain networked control system NCS with limited communication among subcomponents is a challenging task and event based sampling helps resolve the issue This book considers event triggered scheme as a transmission protocol to negotiate information exchange in resilient control for NCS via a robust control algorithm to regulate the closed loop behavior of NCS in the presence of mismatched uncertainty with limited feedback information It includes robust control algorithm for linear and nonlinear systems with verification Features Describes optimal control based robust control law for event triggered systems States results in terms of Theorems and Lemmas supported with detailed proofs Presents the combination of network interconnected systems and robust control strategy Includes algorithmic steps for precise understanding of the control technique Covers detailed problem statement and proposed solutions along with numerical examples This book aims at Senior undergraduate Graduate students and Researchers in Control Engineering Robotics and Signal Processing

Practical Robot Design Jagannathan Kanniah, M. Fikret Ercan, Carlos A. Acosta Calderon, 2013-10-17 Designed for beginners undergraduate students and robotics enthusiasts Practical Robot Design Game Playing Robots is a comprehensive guide to the theory design and construction of game playing robots Drawing on years of robot building and teaching experience the authors demonstrate the key steps of building a robot from beginning to end with independent examples for extra modules Each chapter covers basic theory and key topics including actuators sensors robot vision and control with examples and case studies from robotic games Furthermore the book discusses the application of AI techniques and provides algorithms and application examples with MATLAB code The book includes Comprehensive coverage on drive motors and drive motor control References to vendor websites as necessary Digital control techniques with a focus on implementation Techniques for designing and implementing slightly advanced controllers for pole balancing robots Basic artificial intelligence techniques with examples in MATLAB Discussion of the vision systems sensor systems and controlling of robots The result of a summer course for students taking up robotic games as their final year project the authors hope that this book will empower readers in terms of the necessary background as well as the understanding of how various engineering fields are amalgamated in robotics

Almost Periodic Type Solutions Marko Kostić, 2025-03-03 Maybe for the first time in the existing literature we investigate here the almost periodic type solutions to the abstract Volterra difference equations depending on several variables We also investigate the generalized almost periodic type sequences and their applications in a rather detailed manner as well as many new important spaces of metrically generalized almost periodic type spaces of sequences and functions We essentially apply some results from the theory of C regularized solution operator families to the abstract Volterra integro differential difference equations contributing also to the theory of fractional calculus and fractional differential equations The theory of abstract Volterra integro differential equations and the theory of abstract

Volterra difference equations are very attractive fields of research of many authors. The almost periodic features and the asymptotically almost periodic features of solutions to the abstract Volterra differential difference equations in Banach spaces have been sought in many research articles published by now. The main aim of this monograph is to continue the work collected in my monographs published with W de Gruyter recently by providing several new results about the existence and uniqueness of almost periodic type solutions to the abstract Volterra integro differential difference equations which could be solvable or unsolvable with respect to the highest derivative order. We would like to particularly emphasize that this is probably the first research monograph devoted to the study of almost periodic type solutions to the abstract Volterra difference equations depending on several variables. We also consider here many new important spaces of metrically generalized almost periodic type spaces of sequences and functions and their almost automorphic analogues. It is also worth noting that this is probably the first research monograph which concerns the generalized almost periodic type sequences and their applications in a rather detailed manner for the first time in the existing literature. We also present here some applications of results from the theory of C regularized solution operator families to the abstract Volterra difference equations. Fractional calculus and discrete fractional calculus are rapidly growing fields of theoretical and applied mathematics which are incredibly important in modeling of various real phenomena appearing in different fields like aerodynamics, rheology, interval valued systems, chaotic systems with short memory and image encryption and discrete time recurrent neural networks. Many important research results regarding the abstract fractional differential equations and the abstract fractional difference equations in Banach spaces have recently been obtained by a great number of authors from the whole world. In this monograph we also contribute to the theories of discrete fractional calculus, fractional differential difference equations and multi dimensional Laplace transform. Although the monograph is far from being complete we have decided to quote almost eight hundred and fifty research articles which could be of some importance to the interested readers for further developments of the theory established here. Nature-based Solutions for Resilient Ecosystems and Societies Shalini Dhyani, Anil Kumar Gupta, Madhav Karki, 2020-07-07. Over the past few decades the frequency and severity of natural and human induced disasters have increased across Asia. These disasters lead to substantial loss of life, livelihoods and community assets which not only threatens the pace of socio economic development but also undo hard earned gains. Extreme events and disasters such as floods, droughts, heat, fire, cyclones and tidal surges are known to be exacerbated by environmental changes including climate change, land use changes and natural resource degradation. Increasing climate variability and multi dimensional vulnerabilities have severely affected the social, ecological and economic capacities of the people in the region who are economically speaking those with the least capacity to adapt. Climatic and other environmental hazards and anthropogenic risks coupled with weak and wavering capacities severely impact the ecosystems and Nature's Contributions to People (NCP).

and thereby to human well being Long term resilience building through disaster risk reduction and integrated adaptive climate planning therefore has become a key priority for scientists and policymakers alike Nature based Solutions NbS is a cost effective approach that utilizes ecosystem and biodiversity services for disaster risk reduction and climate change adaptation while also providing a range of co benefits like sustainable livelihoods and food water and energy security This book discusses the concept of Nature based Solutions NbS both as a science and as art and elaborates on how it can be applied to develop healthy and resilient ecosystems locally nationally regionally and globally The book covers illustrative methods and tools adopted for applying NbS in different countries The authors discuss NbS applications and challenges research trends and future insights that have wider regional and global relevance The aspects covered include landscape restoration ecosystem based adaptation ecosystem based disaster risk reduction ecological restoration ecosystem based protected areas management green infrastructure development nature friendly infrastructure development in various ecosystem types agro climatic zones and watersheds The book offers insights into understanding the sustainable development goals SDGs at the grass roots level and can help indigenous and local communities harness ecosystem services to help achieve them It offers a unique essential resource for researchers students corporations administrators and policymakers working in the fields of the environment geography development policy planning the natural sciences life sciences agriculture health climate change and disaster studies

Systems and Signal Processing, 1991 *Advances in Neural Information Processing Systems 8* David S. Touretzky, Michael C. Mozer, Michael E. Hasselmo, 1996 The past decade has seen greatly increased interaction between theoretical work in neuroscience cognitive science and information processing and experimental work requiring sophisticated computational modeling The 152 contributions in NIPS 8 focus on a wide variety of algorithms and architectures for both supervised and unsupervised learning They are divided into nine parts Cognitive Science Neuroscience Theory Algorithms and Architectures Implementations Speech and Signal Processing Vision Applications and Control Chapters describe how neuroscientists and cognitive scientists use computational models of neural systems to test hypotheses and generate predictions to guide their work This work includes models of how networks in the owl brainstem could be trained for complex localization function how cellular activity may underlie rat navigation how cholinergic modulation may regulate cortical reorganization and how damage to parietal cortex may result in neglect Additional work concerns development of theoretical techniques important for understanding the dynamics of neural systems including formation of cortical maps analysis of recurrent networks and analysis of self supervised learning Chapters also describe how engineers and computer scientists have approached problems of pattern recognition or speech recognition using computational architectures inspired by the interaction of populations of neurons within the brain Examples are new neural network models that have been applied to classical problems including handwritten character recognition and object recognition and exciting new work that focuses on building electronic hardware modeled after neural systems A Bradford
