**Relevant Query Answering over Streaming and Distributed Data** Shima Zahmatkesh, Emanuele Della Valle, 2020-01-21 This book examines the problem of relevant query answering over the Web and provides a comprehensive overview of relevant query answering over streaming and distributed data. In recent years Web applications that combine highly dynamic data streams with data distributed over the Web to provide relevant answers have attracted increasing attention. Answering in a timely fashion i.e. reactively is one of the most important performance indicators especially when the distributed data is evolving. The book proposes a solution that retains a local replica of the distributed data and offers various maintenance policies to refresh the replica over time. A limited refresh budget guarantees the reactivity of the system. Focusing on stream processing and Semantic Web it appeals to scientists and graduate students in the field.

**Linked Data Management** Andreas Harth, 2014-01-01 Linked Data Management presents techniques for querying and managing Linked Data that is available on today's Web. The book shows how the abundance of Linked Data can serve as fertile ground for research and commercial applications. The text focuses on aspects of managing large scale collections of Linked Data. It offers a detailed introduction to Linked Data and related standards including the main principles distinguishing Linked Data from standard database technology. Chapters also describe how to generate links between datasets and explain the overall architecture of data integration systems based on Linked Data. A large part of the text is devoted to query processing in different setups. After presenting methods to publish relational data as Linked Data and efficient centralized processing the book explores lookup based distributed and parallel solutions. It then addresses advanced topics such as reasoning and discusses work related to read/write Linked Data for system interoperation. Despite the publication of many papers since Tim Berners-Lee developed the Linked Data principles in 2006 the field lacks a comprehensive unified overview of the state of the art. Suitable for both researchers and practitioners this book provides a thorough consolidated account of the new data publishing and data integration paradigm. While the book covers query processing extensively the Linked Data abstraction furnishes more than a mechanism for collecting integrating and querying data from the open Web the Linked Data technology stack also allows for controlled sophisticated applications deployed in an enterprise environment.

*Query Processing over Graph-structured Data on the Web* M. Acosta Deibe, 2018-10-12 In the last years Linked Data initiatives have encouraged the publication of large graph structured datasets using the Resource Description Framework (RDF). Due to the constant growth of RDF data on the web more flexible data management infrastructures must be able to efficiently and effectively exploit the vast amount of knowledge accessible on the web. This book presents flexible query processing strategies over RDF graphs on the web using the SPARQL query language. In this work we show how query engines can change plans on the fly with adaptive techniques to cope with unpredictable conditions and to reduce execution time. Furthermore this work investigates the application of crowdsourcing

in query processing where engines are able to contact humans to enhance the quality of query answers The theoretical and empirical results presented in this book indicate that flexible techniques allow for querying RDF data sources efficiently and effectively
