[Math worksheet for children](#) Tripti singh, Math worksheet for  
[Mom! I Learn Addition Using Math-Chess-Puzzles Connection](#)

Frank Ho, Amanda Ho, 2015-12-14 What's wrong with the traditional drill computation? From a tutoring point of view, there is nothing wrong with giving them to children for practice on fluency and grasp of basics. However, there is something wrong from children's point of view: that is, they are boring, dull, and not fun. Why do children feel that way? Well, the time has changed, but the format of traditional computation worksheets has not caught up with the pace of the society. The future belongs to a generation who understands how to process information, and the information might include digits, bytes, numbers, graphics, images, languages, symbols, equations, etc. Children today might chat with others on the internet while downloading or uploading files and viewing movie clips at the same time. Multi-tasking and the multi-way of processing information seem to have come as a second nature to children, but is our computation format reflecting the way that children are living today? Certainly not. This is one reason why children feel so bored and lost interest to continue to work on the same old style of computation worksheets. These simple, monotonic, basic number facts computation worksheets are no longer reflecting the real world which the young generation is facing today or will be living in the future. The computing world children are facing today is much like a rich tapestry where diversified fabrics and colours are integrated. Children today are absorbing not just numbers but an array of information like image, sound, music, symbols, spatial information, or even abstract ideas, all bundled together and delivered through many types of media. Children today are not happy just working on pure number drill without any other stimulus or motivator. After realizing the importance of having fun while learning, Ho Math Chess has embarked on an important teaching philosophy: that is, to integrate chess and puzzles into math worksheets so that children can learn math while having fun. Ho Math Chess has created a series of special printable workbooks to have a synergetic effect by integrating or converging arithmetic, basic number facts, chess mazes, and information processing all in one worksheet. This is accomplished through Ho Math Chess's own trademarked proprietary technologies such as Symbolic Chess Language (SCL), Frankho Puzzle, Frankho Maze, and the Ho Math Chess training set. With this invention of math chess and puzzles integrated worksheets, a child is acting as a data warehouse manager and sorts, matches, or classifies data in an information environment which simulates a cell phone screen using an incredible variety of learning concepts: namely, chess symbols, spatial relation, logic, comparison, tables, patterns, mazes, computing, etc., by networking all kinds of information together. The learning process is much like searching information using the internet. Only when children have successfully followed instructions using SCL and as a result created a question themselves, can a solution be found. At last, Ho Math Chess workbook is a multi-function workbook; it trains children not only their basic computing ability but also trains them to be an astute data warehouse manager or an excellent data miner by developing their problem-solving ability and critical thinking skills.
