DOM Scripting Jeremy Keith, 2006-11-07

We know from the success of titles such as *Web Standards Solutions Cascading Style Sheets Separating Content from Presentation* and *The Web Designer's Reference* that web designers are increasingly concerned with making sites that don't just look pretty but are also built using current best practices. There are three main technologies married together to create usable standards compliant web designs: XHTML for data structure, Cascading Style Sheets for styling your data, and JavaScript for adding dynamic effects and manipulating structure on the fly using the Document Object Model. This book is about the latter of the three: DOM Scripting. *Web Design with JavaScript and the Document Object Model* gives you everything you need to start using JavaScript and the Document Object Model to enhance your web pages with client side dynamic effects. Jeremy Keith starts off by giving you a basic crash course in JavaScript and the DOM, then moves on to provide you with several real world examples built up from scratch, including dynamic image galleries and dynamic menus. Then he shows you how to manipulate web page style using the CSS DOM and create markup on the fly.

**Google and the Mission to Map Meaning and Make Money** Bart Milner, 2004

This book is the unfolding story of the new technology of Internet Search: how Larry Page and Sergey Brin, the founders of Google, discovered a new way to index the Internet's network of networks by developing search methods so powerful that they effectively created a free public and universal library out of billions of random documents. It also tells how, together with the help of a brilliant team built initially at Stanford University, they then found a new way of making money through contextual advertising, now worth a billion, leaving potential competitors, particularly Microsoft, far behind. It shows how Google's founders have also succeeded in insisting that integrity rather than profit remains at the heart of an enterprise that they will continue to control despite the best efforts of Wall Street. The second half of this book also seeks to explain the central problems of machine intelligence: the difference between words and their meaning or syntax and semantics, which had blocked this kind of IT development for half a century until Google's founders discovered that hypertext, the unique feature of the Internet that links documents, could be measured and mapped to sort millions of apparently similar pages for relevance and significance. Google's pursuit of a hugely ambitious and optimistic American dream that leaves them globally admired and respected, keeping their principles intact whilst also creating a fabulously wealthy company, is a winning blend of luck, jokes, mathematical inspiration, engineering perspiration, deep technical knowledge of the Internet, and they would have you believe thousands of highly trained pigeons. The book is 288 pages long, including a comprehensive index and 600 item bibliography covering virtually all aspects of Internet Search. The print version of the book comes with a free online electronic version with hypertext links to related articles and books designed to make any aspect of the history of Internet search easy to find with a couple of mouse clicks. The book's author, Bart Milner, is a trained technology journalist and editor who started using the Web in 1984 with a 300 baud acoustic coupler.

and then became a developer partly to try and solve the question of why computer logic has been unable to deal with meaning and association This background has given him an insight into the inspired but almost accidental way that Google's founders cracked the problem of finding a significant document from billions of unindexed and changing Web pages in a fraction of a second Anyone interested in the future of the Internet and Information Technology should enjoy this fast and fluid story of a company which has become a flagship business of the 21st century by not conceding any of its integrity and principles to the huge pressures of commercial profit whilst providing some of the most elegant and powerful engineering solutions ever seen on the Net

Laudon, Carol Guercio Traver, 2007 In today's evolving business environment E-commerce business technology society introduces students to the concepts and practice of electronic commerce This book emphasizes the three major forces behind e-commerce business fundamentals technology opportunities and social issues In every chapter these three themes come alive with the discussion of e-commerce concepts in the areas of economics marketing and information technology and with the presentation of real world e-commerce business cases and stories The result is a coherent framework for organizing a complex topic which promotes a clear understanding of how e-commerce is evolving Book jacket
