**Challenges in VHEE Radiotherapy** Luigi Palumbo,Angeles Faus Golfe,Paola Ballesteros Zebadua, Jiaru Shi ,2025-12-19 VHEE Very High Energy Electron radiotherapy is an emerging technique in the field of radiation therapy aimed at delivering radiation to cancerous tissues with high energy electrons VHEE radiotherapy holds relevant potential benefits that have attracted intense scientific and technological interest and at present a consolidated R D topic around the world However its implementation in clinical applications poses challenges in several interdisciplinary fields One of the main issues concerns Beam Production and Dose Delivery VHEE requires linear accelerators capable of producing electrons with energies in the

range of 50 250 MeV which are much higher than what traditional electron beam therapies use The high intensity of the electron beam must allow the radiation treatment to reach Ultra High Dose Rates UHDR to also explore the FLASH regime In addition the device should be compact and reliable suitable for a hospital environment VHEE beams have the potential to penetrate deep seated tumors more effectively than traditional low energy electron beams However accurately predicting the range of these high energy electrons in different tissue types and accounting for tissue heterogeneities is a challenge Indeed the depth dose distribution of VHEE beams is different from that of conventional low energy electron beams Factors like beam scattering and range can influence the dose deposition profile which requires careful consideration during treatment planning Therefore accurate calculation and planning of the radiation dose delivered to the tumor while sparing surrounding healthy tissues is crucial VHEE dosimetry and treatment planning systems need to be carefully developed and validated to ensure precise dose delivery Verifying the accuracy of VHEE treatments is essential Techniques such as in vivo dosimetry and imaging e g cone beam CT or portal imaging must be developed to ensure that the intended dose is accurately delivered to the tumor
