for Robot Intelligence and Autonomy* Daniele Pucci,Vadim Tikhanoff,Ugo Pattacini,Maxime Petit,Lorenzo Jamone,2020-02-25  
Intelligence and autonomy are among the most extraordinary capacities blossomed by human evolution Yet endowing  
humanoid robots with these two crucial capabilities is still one of the biggest problems for the robotics community despite  
decades of research On the software side algorithms for artificial intelligence are still at an embryonic stage On the hardware  
side robotic actuators are a far cry from the muscular human system in terms of flexibility and adaptability which in turn  
reduces autonomy and robustness Underneath the nature of algorithms for intelligence and technology for autonomy the  
importance of efficient scalable implementations of robust software goes without saying Among the large variety of humanoid  
robots the iCub has emerged as one of the most diffused research platforms It has been developed as part of the RobotCub  
EU project and subsequently adopted by more than 35 laboratories worldwide Collaborations across laboratories are  
encouraged by writing code and libraries openly available As a consequence iCub is considered to be the ideal platform for  
experimenting and advancing open source software for research in several domains ranging from motor control to cognitive
