research In the second phase site visits were made to fresh installations throughout North Carolina to obtain sample elastomeric concrete mixed in the field Those sites were later revisited to obtain material from the same expansion joint after at least 4 months in service When revisited samples were obtained through means of coring Cored sample test data could then be compared to the fresh sampling data to determine changes in physical properties with time Older existing joints over 5 years in service life were also identified and sampled to determine the physical property changes associated with long term cyclic loading and environmental weathering
