**The Mathematical Olympiad Handbook** Anthony Gardiner, 1997

Mathematical Olympiad competitions started in Hungary at the end of the nineteenth century and are now held internationally. They bring together able secondary school pupils who attempt to solve problems which develop their mathematical skills. Olympiad problems are unpredictable and have no obvious starting point and although they require only the skills learnt in ordinary school problems they can seem much harder. The *Mathematical Olympiad Handbook* introduces readers to these challenging problems and aims to convince them that Olympiads are not just for a select minority. The book contains problems from the first 32 British Mathematical Olympiad BMO papers 1965-96 and gives hints and outline solutions to each problem from 1975 onwards. An overview is given of the basic mathematical skills needed and a list of books for further reading is provided. Working through the exercises provides a valuable source of extension and enrichment for all pupils and adults interested in mathematics.

**The Hard Mathematical Olympiad Problems and Their Solutions** Steve Dinh, 2011

This book shows the approaches to solving many difficult Mathematical Olympiad and other international problems posted at the [www.mathlinks.ro](http://www.mathlinks.ro) the largest mathematical webpage that has most of the problems used to select the talented students of the world. At the time of this book's publication the solutions to many of these problems are not yet available. This book is not only as much about methods of solving mathematical problems as it is about various approaches to solving the difficult problems in general. It is a first step in examining the creativity that goes into problem solving. The real points of the book are the enumeration of problem solving strategies and the tricks applied to solve the problems. The approaches in the book build understanding and not just methods in solving problems. This book is a must read for many math students and is useful for many teachers around the world.

This is the sixth volume in that series published by the MAA in its Problem Book series. The IMO is the world mathematics championship for high school students. It takes place annually in a different country each year. The aims of the IMO are 1 to discover, encourage and challenge mathematically gifted young people in all countries, 2 to foster friendships between mathematicians around the world, 3 to create an opportunity for the exchange of information on school syllabi and practice throughout the world. The USAMO and the Team Selection Test TST are the last two stages of the selection process for the United States of America IMO team. The preceding examinations are the AMC 10

or AMC12 and the American Invitational Mathematics Examination AIME Participation in the AIME USAMO and the TST is by invitation only based on performance in the preceding exams of the sequence Through the AMC contests and the IMO young gifted mathematicians are identified and recognized while they are still in secondary school Participation in the competitions provides them with the chance to measure themselves against other exceptional students from all over the world This work was prepared by Zuming Feng Melanie Matchett Wood the Leader and Deputy Leader of the 2004 USA IMO team and by Cecil Rousseau the chair of the USAMO Committee In addition to presenting their own carefully written solutions to the problems Zuming and Melanie provide remarkable solutions developed by the examination committees contestants and experts during or after the contests They also provide a detailed report of the 2000 2004 USAMO IMO results and a comprehensive guide to other material that emphasize advances problem solving This collection of excellent problems and beautiful solutions is a valuable companion for students who wish to develop their interest in mathematics outside the school curriculum and to deepen their knowledge of mathematics
