- Today the majority of US internet bandwidth during prime time is video, and the majority of that is adaptively streamed long form content such as TV and movies
- Cisco projects video will be over 90% of internet bandwidth by 2014 – the Internet will mainly become a video network
- Content Delivery Networks (CDNs) make this possible by “edge caching” frequently viewed content
- Adaptive streaming has been engineered for efficient edge caching, and to withstand network congestion and unreliable network bandwidth and latency
