[GPU Parallel Program Development Using CUDA](#) Tolga Soyata,2018-01-19 GPU Parallel Program Development using CUDA teaches GPU programming by showing the differences among different families of GPUs This approach prepares the reader for the next generation and future generations of GPUs The book emphasizes concepts that will remain relevant for a long time rather than concepts that are platform specific At the same time the book also provides platform dependent explanations that are as valuable as generalized GPU concepts The book consists of three separate parts it starts by explaining parallelism using CPU multi threading in Part I A few simple programs are used to demonstrate the concept of dividing a large task into multiple parallel sub tasks and mapping them to CPU threads Multiple ways of parallelizing the same task are analyzed and their pros cons are studied in terms of both core and memory operation Part II of the book introduces GPU massive parallelism The same

programs are parallelized on multiple Nvidia GPU platforms and the same performance analysis is repeated. Because the core and memory structures of CPUs and GPUs are different, the results differ in interesting ways. The end goal is to make programmers aware of all the good ideas as well as the bad ideas so readers can apply the good ideas and avoid the bad ideas in their own programs. Part III of the book provides pointers for readers who want to expand their horizons. It provides a brief introduction to popular CUDA libraries such as cuBLAS, cuFFT, NPP, and Thrust; the OpenCL programming language; an overview of GPU programming using other programming languages and API libraries such as Python, OpenCV, OpenGL, and Apple's Swift and Metal; and the deep learning library cuDNN.

Accelerating MATLAB with GPU Computing Jung W. Suh, Youngmin Kim, 2013-11-18. Beyond simulation and algorithm development, many developers increasingly use MATLAB even for product deployment in computationally heavy fields. This often demands that MATLAB codes run faster by leveraging the distributed parallelism of Graphics Processing Units (GPUs). While MATLAB successfully provides high-level functions as a simulation tool for rapid prototyping, the underlying details and knowledge needed for utilizing GPUs make MATLAB users hesitate to step into it. *Accelerating MATLAB with GPUs* offers a primer on bridging this gap. Starting with the basics, setting up MATLAB for CUDA in Windows, Linux, and Mac OS X, and profiling it, then guides users through advanced topics such as CUDA libraries. The authors share their experience developing algorithms using MATLAB C and GPUs for huge datasets, modifying MATLAB codes to better utilize the computational power of GPUs, and integrating them into commercial software products. Throughout the book, they demonstrate many example codes that can be used as templates of C, MEX, and CUDA codes for readers' projects. Download example codes from the publisher's website: <http://booksite.elsevier.com/9780124080805>. Shows how to accelerate MATLAB codes through the GPU for parallel processing with minimal hardware knowledge. Explains the related background on hardware architecture and programming for ease of use. Provides simple, worked examples of MATLAB and CUDA C codes as well as templates that can be reused in real-world projects.
