## AI Today

Today, AI is used across the globe and can be found in both the real and virtual worlds. AI is used in many ways, including: virtual assistants, recommendation systems, self-driving cars, and more. Many smartphones use AI for features like voice search and facial recognition.

Other uses of AI include virtual assistants, recommendation systems, self-driving cars, and more. Many smartphones use AI for features like voice search and facial recognition.

In the field of medicine, AI is helping to diagnose patients. Researchers are using AI to discover new drugs and treatments.

## Advantages and Disadvantages

AI technology is a double-edged sword. It can be used for good or evil. In the hands of the right people, it can help us solve some of our most pressing problems. But in the hands of the wrong people, it can be used to harm us.

However, there are some potential risks. AI can be extremely expensive to develop and maintain. It can also be used to create jobs that humans can't do. And, of course, there's the risk of human-like intelligence. AI could become self-aware and take over the world.

## How is AI Evolving?

While most current AI is referred to as narrow AI, that can only perform the task they are explicitly programmed to do, many AI researchers are working on general AI. This would be a machine that could do anything a human could do. It's still a long way off, but it's the goal of many AI researchers. It is becoming more frequently mentioned in the news and by other AI experts.

Artificial intelligence (AI) technology, such as streaming services and virtual assistants, can be used to help us in many ways.

## What is AI?

AI is a computer that simulates human intelligence. It can learn from data and make decisions based on that information. AI is used in many ways, including in self-driving cars, recommendation systems, and virtual assistants.

## The History of AI

In 1956, a group of scientists gathered in Dartmouth to discuss the possibility of creating artificial intelligence. This was the beginning of the field of AI.

After a few years, computers and technology had improved enough that the computer industry was able to create one of the first AI programs in 1959. In 1969, a program called ELIZA was created, which simulated a human therapist. In 1974, a program called SHRDLU was created, which could understand and respond to natural language.

In the early 1980s, knowledge of computers, AI and technology grew. In 1981, an AI program named Deep Blue was able to play a chess game against the reigning world chess champion, Garry Kasparov. In 1996, a program called Deep Blue defeated Kasparov in a chess match.

## Did You Know...?

Many smartphones use AI for facial recognition.

## AI Today

Presently, AI is used worldwide and in numerous ways. Streaming services, such as Netflix and YouTube, use AI to recommend shows to watch based on what is popular in their platform. Virtual assistants, such as Siri, use AI to answer questions and complete tasks.
