*Machine Learning under Resource Constraints - Applications* Katharina Morik, Jörg Rahnenführer, Christian Wietfeld, 2022-12-31 Machine Learning under Resource Constraints addresses novel machine learning algorithms that are challenged by high throughput data by high dimensions or by complex structures of the data in three volumes Resource constraints are given by the relation between the demands for processing the data and the capacity of the computing machinery The resources are runtime memory communication and energy Hence modern computer architectures play a significant role Novel machine learning algorithms are optimized with regard to minimal resource consumption Moreover learned predictions are executed on diverse architectures to save resources It provides a comprehensive overview of the novel approaches to machine learning research that consider resource constraints as well as the application of the described methods in various domains of science and engineering Volume 3 describes how the resource

aware machine learning methods and techniques are used to successfully solve real world problems The book provides numerous specific application examples In the areas of health and medicine it is demonstrated how machine learning can improve risk modelling diagnosis and treatment selection for diseases Machine learning supported quality control during the manufacturing process in a factory allows to reduce material and energy cost and save testing times is shown by the diverse real time applications in electronics and steel production as well as milling Additional application examples show how machine learning can make traffic logistics and smart cities more efficient and sustainable Finally mobile communications can benefit substantially from machine learning for example by uncovering hidden characteristics of the wireless channel
