Introduction To Geospatial Information Broker

**Michael Goodchild, Max J.
Egenhofer, Robin Fegeas, Cliff Kottman**

Introduction To Geospatial Information Broker:

Introduction to Geospatial Information and Communication Technology (GeoICT) Rifaat Abdalla,2016-07-25 This book is designed to help students and researchers understand the latest research and development trends in the domain of geospatial information and communication GeoICT technologies Accordingly it covers the fundamentals of geospatial information systems spatial positioning technologies and networking and mobile communications with a focus on OGC and OGC standards Internet GIS and location based services Particular emphasis is placed on introducing GeoICT as an integrated technology that effectively bridges various information technology domains

Interoperating Geographic Information Systems Michael Goodchild,Max J. Egenhofer,Robin Fegeas,Cliff Kottman,2012-12-06 Geographic information systems have developed rapidly in the past decade and are now a major class of software with applications that include infrastructure maintenance resource management agriculture Earth science and planning But a lack of standards has led to a general inability for one GIS to interoperate with another It is difficult for one GIS to share data with another or for people trained on one system to adapt easily to the commands and user interface of another Failure to interoperate is a problem at many levels ranging from the purely technical to the semantic and the institutional Interoperating Geographic Information Systems is about efforts to improve the ability of GISs to interoperate and has been assembled through a collaboration between academic researchers and the software vendor community under the auspices of the US National Center for Geographic Information and Analysis and the Open GIS Consortium Inc It includes chapters on the basic principles and the various conceptual frameworks that the research community has developed to think about the problem Other chapters review a wide range of applications and the experiences of the authors in trying to achieve interoperability at a practical level Interoperability opens enormous potential for new ways of using GIS and new mechanisms for exchanging data and these are covered in chapters on information marketplaces with special reference to geographic information Institutional arrangements are also likely to be profoundly affected by the trend towards interoperable systems and nowhere is the impact of interoperability more likely to cause fundamental change than in education as educators address the needs of a new generation of GIS users with access to a new generation of tools The book concludes with a series of chapters on education and institutional change Interoperating Geographic Information Systems is suitable as a secondary text for graduate level courses in computer science geography spatial databases and interoperability and as a reference for researchers and practitioners in industry commerce and government
