wrong Our great naturalist Darwin laid down as a law of evolution that the moral sense or conscience is by far the most important of the differences between man and the lower animals Duty ought is the most noble of all the attributes of man Victor Hugo with the prophetic insight of genius calls conscience that modicum of innate science with which each one is born The growth of human conscience in its perception of justice and in its sympathetic relation to creation is the surest measure of individual and national progress Various intellectual theories may be formed as to the origin and growth of conscience It may be held to be intuitive springing up as inevitably as the instinctive feelings born with the natural relations of life or it may be looked upon as gradually evolved the result of countless experiences of fear love utility transmitted through generations But however originating conscience is a positive and potent fact It is indeed the mightiest factor in social life It is the great controller of selfhood It enlarges human character and guides human conduct The deepening of this principle through the growth of justice and sympathy marks an advancement in the type of humanity Increasing respect for life is one of the clearest signs of growing conscience Our reverence for the principle of life grows with our enlarging intellectual perception of its universality and its unlimited power of development As life is marked by activity and cannot remain stationary so conscience shares this law of life It must inevitably advance or retrograde The degradation as well as the development of conscience may be seen amongst us in the midst of our present civilization It is contrary to the most rudimentary element of conscience to feed upon one s kind and cannibal tribes who devour their captives represent the lowest type of humanity even the dogs of the Arctic voyager will endure the slow agony of starvation for days before their human taskmasters can compel them to eat the flesh of their companions The well known naturalist Mr W H Hudson states that wolves when pressed with hunger will sometimes devour a fellow wolf as a rule however rapacious animals will starve to death rather than prey upon one of their own kind
