

How to Get Some Perspective in Your Drawings

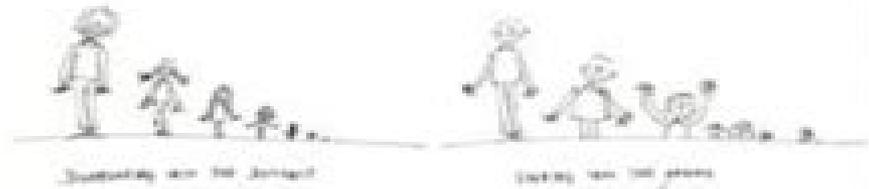

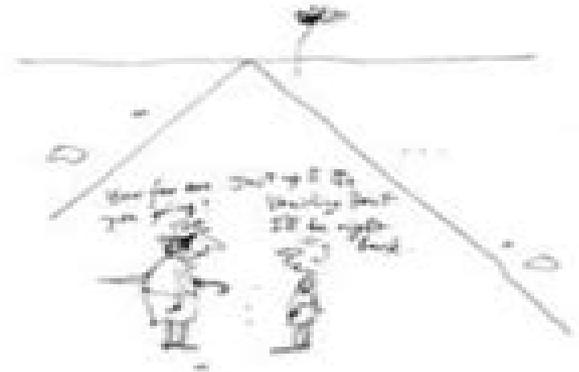

The amount of air getting to the lamp is the same, whether you're in front of it, or behind it, and you get the same amount of light. But for those who walk with you, or sit in a car, and see it from above, there is one angle each which catches all the available light. Things that are far away look smaller than things that are nearby. This is one of those facts that you already know, or will know when you think in perspective. It's in describing the location of your hand here at the end of your arm.

Draw the idea of "things that look smaller" and you have some of the interesting confusion that things that are "small" but may seem to completely invisible.

What things are in the second row that are in perspective showing the remaining parts.

Perhaps the easiest way to describe the remaining part is this: if you are standing on a street highway, you don't see straight and don't see the remaining part is when the highway disappears into the distance, what the rest of it is seen together in the distance.
