In terms of ensuring trust governments have many different ways of performing the same role The newly developed technology of the blockchain is revolutionary in offering the first ever mechanism to ensure trust In summary there are three close similarities between blockchain and bureaucracy First both of them are defined by the rules and execute predetermined rules Second both of them work as information processing machines for society Third both of them work as trust machines for society Therefore I posit that it is possible and moreover unavoidable to replace bureaucracy with blockchain systems In conclusion I suggest five principles that should be adhered to when we replace bureaucracy with the blockchain system 1 introducing Blockchain Statute law 2 transparent disclosure of data and source code 3 implementing autonomous executing administration 4 building a governance system based on direct democracy and 5 making Distributed Autonomous Government DAG **The Blockchain Government** Michael Mathiesen,2021-03-06 Most people will agree It s time for something different in our political and economic systems The Blockchain Government provides us all with completely secure and fair ways to do the bidding of the majority of people automatically over the Internet using a Blockchain and the Smart Contract Join the Community Every two or three days you notice that your computer is being automatically upgraded in the operating system by your manufacturer You also notice your phone gets upgraded automatically sometimes without you even realizing it The manufacturers find bugs in their programming or compatibility issues with new APPS Wanting their customers to enjoy their devices more and more they can easily and efficiently make regular major improvements to their products and services over the Internet with no human intervention And this is how technology should work and does work and which we all take for granted today However the most important operating system our political and economic operating system which was designed over two centuries ago has only been upgraded a few times to free the slaves and allow women to vote Oh there were a couple more times when they made it illegal to drink or sell alcohol but a few years later had to change it back when everyone ignored that change But there has never been any substantial systemic change in how we do business or make our major decisions So we are still forced to use a system of decision making that was designed during a time when there was no electric lights There were no phones because there was no electrical grid there was no TV or video games and there certainly were no computers or the Internet People entertained themselves by reading the Bible by candlelight until they fell asleep from the sheer boredom The government itself will claim that there s no need to make major changes to our form of Democracy because those we elect are good enough to make the best decisions for us Yet somehow the problems we face are never solved until the problems have washed over us doing their worst damages and then fade into history By the time they finally abort all of the bickering arguing party politicking grandstanding name calling the solution they have landed on makes for worse problems than the one they were trying to fix that happened already and took its toll on us while we sat around and listened to fancy speeches thinking this would someday lead to a solution So they will resist making the changes I describe in this book But Truth as powerful as this that a computer program can make decisions for us

much faster and more logically and equitably than any other human mechanism of compromise and political idiot ologies cannot be denied and so it will happen whether they like it or not With the success of Bitcoin everyone on the planet is already educated to the potential benefits of the Blockchain the Smart Contract the same kind of programming that allows the Internet to produce so many great things for the world every day Some forward thinking and progressive governments around the world are already experimenting with Blockchain Government and the lessons they are learning are revolutionary in scope and social advancement The largest and most powerful Democracy the United States of America has yet to take a stand on this subject yet they know the writing is on the wall There will come a time and day soon when they will surrender to the will of the people and allow us to express that will every day but we will all have to armed with the TRUTH to bring them kicking and screaming to the Future Mohatma Gandhi said First they will ignore you Then they will laugh at you Then they will fight you Then you win They are ignoring us stage one in the fight for true freedom liberty and justice for all has just begun Learn absorb personalize internalize socialize propagate the word **Dubai 5.0, The New Model** Serge Engerran yoni,Soraya Manel Djermoun,2019-09-12 What do you think about Dubai Oil sand camels In this book the authors offer the keys to understand this modern and innovative City through its History its macroeconomy its Government and all the strategies used and applied to reach such power nowadays The State objectives and challenges EXPO 2020 Vision 2021 Area 2071 The will cover the predominant foreign labor force the ministries and laws governing the State the taxation the economic and financial tools and we will explain how SME s and larger companies can be part of this successful market and how to enter it **Blockchain for Digital Government** Francesco Pignatelli,2019 In less than ten years from its advent in 2008 the concept of distributed ledgers has entered into mainstream research and policy agendas Enthusiastic reception fuelled by the success of Bitcoin and the explosion of potential use cases created high if not hyped expectations with respect to the transformative role of blockchain for the industry and the public sector Growing experimentation with distributed ledgers and the emergence of the first operational implementations provide an opportunity to go beyond hype and speculation based on theoretical use cases This report looks at the ongoing exploration of blockchain technology by governments The analysis of a group of pioneering developments of public services shows that blockchain technology can reduce bureaucracy increase the efficiency of administrative processes and increase the level of trust in public recordkeeping Based on the state of art developments blockchain has not yet demonstrated to be either transformative or even disruptive innovation for governments as it is sometimes portrayed Ongoing projects bring incremental rather than fundamental changes to the operational capacities of governments Nevertheless some of them propose clear value for citizens Technological and ecosystem maturity of distributed ledgers have to increase in order to unlock the transformative power of blockchain Policy agenda should focus on non technological barriers such as incompatibility between blockchain based solutions and existing legal and organizational frameworks This principal policy goal cannot be achieved by adapting

technology to legacy systems It requires using the transformative power of blockchain to be used to create new processes organizations structures and standards Hence policy support should stimulate more experimentation with both the technology and new administrative processes that can be re engineered for blockchain **Research Anthology on Blockchain Technology in Business, Healthcare, Education, and Government, VOL 4** Information Reso Management Association,2020-12-07 **Blockchain Technology** Selvarani Mariappan,2020 Blockchain is one of the most splendid technologies in today s industrial sector which is going to disrupt various sectors and the way the process product and services have been done today Both government corporate and institutions started exploring the opportunities in blockchain technology which paves a fresh route for beneficial growth and development in this industry The strategy taken by the Indian Government on the development and application of Blockchain started with the Indiachain colossal blockchain pilot project of NITI Aayog through which government is going to use blockchain for land records identity management supply chain management benefit distribution power distribution educational certificates and cross border finance It will help all stakeholders enormously in terms of enforcing contracts quickly and prevent fraud and efficient disbursement of subsidies Further through regulatory sandbox it will test the work possibilities and facilities in blockchain through a pilot project New kind of business model and the process will be implemented with the use of blockchain technology This paper reviews the concept of Blockchain and analyse the available and prospective Blockchain technology use cases and its application at a global level technology providers and stakeholders This paper covers the adoption policy framework of India current development and application of Blockchain technology in various sectors of business in India and highlights the changing business model for its adoption **The Future with Blockchain - Part 1** Ahmed Omar,2020-09-08 To be able to predict the future you have to study the history first and make a proper root cause analysis This book therefore takes you through the history of Blockchain Cryptocurrency as the first used application of Blockchain and the future of Blockchain The book audience targets any level of knowledge starting from zero knowledge about IT or Blockchain to experts who know about Blockchain and want to know more about it especially regarding various future use cases for Cryptocurrency or IT applications This book will appeal to a wide range of people who are interested in knowing more about Blockchain in general Fintech companies technology partners financial sector enthusiasts Government decision makers and anyone who would like to take their first step in Blockchain and Cryptocurrency The book is divided into two parts covering all aspects of Blockchain from introductory level to the future of Blockchain in business and technical areas The book will present separate chapters for each of these areas from history to Blockchain impact on that area whether business or IT technology related The Blockchain technology and revolution is gathering speed and progressing daily even more so than normal IT tech progress The aim of this book is thus to give a better understanding of why the future could be enhanced with Blockchain

Blockchain Technology and Applications Ahmed Banafa,2022-09-01 Blockchain is an emerging technology that can

radically improve transactions security at banking supply chain and other transaction networks It s estimated that Blockchain will generate 3 1 trillion in new business value by 2030 Essentially it provides the basis for a dynamic distributed ledger that can be applied to save time when recording transactions between parties remove costs associated with intermediaries and reduce risks of fraud and tampering This book explores the fundamentals and applications of Blockchain technology Readers will learn about the decentralized peer to peer network distributed ledger and the trust model that defines Blockchain technology They will also be introduced to the basic components of Blockchain transaction block block header and the chain its operations hashing verification validation and consensus model underlying algorithms and essentials of trust hard fork and soft fork Private and public Blockchain networks similar to Bitcoin and Ethereum will be introduced as will concepts of Smart Contracts Proof of Work and Proof of Stack and cryptocurrency including Facebook s Libra will be elucidated Also the book will address the relationship between Blockchain technology Internet of Things IoT Artificial Intelligence AI Cybersecurity Digital Transformation and Quantum Computing Readers will understand the inner workings and applications of this disruptive technology and its potential impact on all aspects of the business world and society A look at the future trends of Blockchain Technology will be presented in the book *Investigative Success Factors Concerning Adoption of Blockchain Technology on Behalf of E-Government Improvement* Chang Li,Don Chen,Lee Chen,Bing Pan,2023 The ability of blockchain technology to record transactions on distributed ledgers offers new opportunities for governments to improve transparency prevent fraud and establish trust in the public sector However blockchain adoption and use in the context of e Government is rather unexplored in academic literature In this paper we systematically review relevant research to understand the current research topics challenges and future directions regarding blockchain adoption for e Government The results show that the adoption of blockchain based applications in e Government is still very limited and there is a lack of empirical evidence The main challenges faced in blockchain adoption are predominantly presented as technological aspects such as security scalability and flexibility From an organizational point of view the issues of acceptability and the need of new governance models are presented as the main barriers to adoption Moreover the lack of law and regulatory support is identified as the main environmental barrier of adoption Based on the challenges presented in the literature we propose future research questions that need to be addressed to inform the best approach in blockchain adoption for e Government systems Research Anthology on Blockchain Technology in Business, Healthcare, Education, and Government, VOL 1 Information Reso Management Association,2020-12-07
