The book begins with the basics explaining Gmail's capabilities and hidden features before moving on to more advanced topics like deconstructing the boot sequence and using Greasemonkey to customize things to your liking. From there, the sky is the limit. You'll see how to access your Gmail without having to check in at the site, create custom Gmail skins with CSS, build your own tools with APIs, get your mail via RSS feeds, use Gmail storage like a spare hard drive, use it as a blogging tool, and more. Gmail is a hacker's dream. Offering more than two gigabytes of storage, an incredibly advanced JavaScript interface, and a series of user interface innovations, it's proving to be one of the flagship applications on the Web. With this book, you can take control of this flagship, trick it out, and use its capabilities in unconventional ways.

Uncovering Student Ideas in Science: 25 new formative assessment probes Page Keeley, 2009. A collection of twenty-five new assessment probes designed to determine students' thinking.

*Googling Security* Greg Conti, 2009. What Does Google Know about You And Who Are They Telling? When you use Google's free services, you pay big time with personal information about yourself. Google is making a fortune on what it knows about you, and you may be shocked by just how much Google does know. *Googling Security* is the first book to reveal how Google's vast information stockpiles could be used against you or your business, and what you can do to protect yourself. Unlike other books on Google hacking, this book covers information you disclose when using all of Google's top applications, not just what savvy users can retrieve via Google's search results. West Point computer science professor Greg Conti reveals the privacy implications of Gmail, Google Maps, Google Talk, Google Groups, Google Alerts, Google's new mobile applications, and more. Drawing on his own advanced security research, Conti shows how Google's databases can be used by others with bad intent, even if Google succeeds in its pledge of "don't be evil." Uncover the trail of informational breadcrumbs you leave when you use Google search. How Gmail could be used to track your personal network of friends, family, and acquaintances. How Google's map and location tools could disclose the locations of your home, employer, family, and friends' travel plans and intentions. How the information stockpiles of Google and other online companies may be spilled, lost, taken, shared, or subpoenaed, and later used for identity theft or even blackmail. How the Google AdSense and DoubleClick advertising services could track you around the Web. How to systematically reduce the personal information you expose or give away. This book is a wake-up call and a how-to self-defense manual, an indispensable resource for everyone, from private citizens to security professionals who rely on Google.
