**Parallel and High Performance Computing** Robert Robey, Yuliana Zamora, 2021-06-22 Complex calculations like training deep learning models or running large scale simulations can take an extremely long time Efficient parallel programming can save hours or even days of computing time Parallel and High Performance Computing shows you how to deliver faster run times greater scalability and increased energy efficiency to your programs by mastering parallel techniques for multicore processor and GPU hardware about the technology Modern computing hardware comes equipped with multicore CPUs and GPUs that can process numerous instruction sets simultaneously Parallel computing takes advantage of this now standard computer architecture to execute multiple operations at the same time offering the potential for applications that run faster are more energy efficient and can be scaled to tackle problems that demand large computational capabilities But to get these benefits you must change the way you design and write software Taking advantage of the tools algorithms and design patterns created specifically for parallel processing is essential to creating top performing applications about the book Parallel and High Performance Computing is an irreplaceable guide for anyone who needs to maximize application performance and reduce execution time Parallel computing experts Robert Robey and Yuliana Zamora take a fundamental approach to parallel programming providing novice practitioners the skills needed to tackle any high performance computing project with modern CPU and GPU hardware Get under the hood of parallel computing architecture and learn to evaluate hardware performance scale up your resources to tackle larger problem sizes and deliver a level of energy efficiency that makes high performance possible on hand held devices When you re done you ll be able to build parallel programs that are reliable robust and require minimal code maintenance This book is unique in its breadth with discussions of parallel algorithms techniques to successfully develop parallel programs and wide coverage of the most effective languages for the CPU and GPU The programming paradigms include MPI OpenMP threading and vectorization for the CPU For the GPU the book covers OpenMP and OpenACC directive based approaches and the native based CUDA and OpenCL languages what s inside Steps for planning a new parallel project Choosing the right data structures and algorithms Addressing underperforming kernels and loops The differences in CPU and GPU architecture about the reader For experienced programmers with proficiency in a high performance computing language such as C C or Fortran about the authors Robert Robey has been active in the field of

parallel computing for over 30 years He works at Los Alamos National Laboratory and has previously worked at the University of New Mexico where he started up the Albuquerque High Performance Computing Center Yuliana Zamora has lectured on efficient programming of modern hardware at national conferences based on her work developing applications running on tens of thousands of processing cores and the latest GPU architectures

**Tools for High Performance Computing 2015** Andreas Knüpfer, Tobias Hilbrich, Christoph Niethammer, José Gracia, Wolfgang E. Nagel, Michael M. Resch, 2016-07-27 High Performance Computing HPC remains a driver that offers huge potentials and benefits for science and society However a profound understanding of the computational matters and specialized software is needed to arrive at effective and efficient simulations Dedicated software tools are important parts of the HPC software landscape and support application developers Even though a tool is by definition not a part of an application but rather a supplemental piece of software it can make a fundamental difference during the development of an application Such tools aid application developers in the context of debugging performance analysis and code optimization and therefore make a major contribution to the development of robust and efficient parallel software This book introduces a selection of the tools presented and discussed at the 9th International Parallel Tools Workshop held in Dresden Germany September 2 3 2015 which offered an established forum for discussing the latest advances in parallel tools

**High Performance Computing in Remote Sensing** Antonio J. Plaza, Chein-I Chang, 2007-10-18 Solutions for Time Critical Remote Sensing Applications The recent use of latest generation sensors in airborne and satellite platforms is producing a nearly continual stream of high dimensional data which in turn is creating new processing challenges To address the computational requirements of time critical applications researchers
