Watkins, 2011-09-26 Water based heating systems are efficient flexible versatile

and offer many advantages over other heating systems. These advantages: fast response, good controllability, efficient zonal heating and largely silent operation, all require that initial design, installation, commissioning and maintenance be carried out to a high standard by competent engineers. Heating Services in Buildings provides the reader with a detailed and thorough understanding of the principles and elements of heating buildings using modern water based heating systems. A key theme of the book is that there is little difference in the approach to the design and engineering between domestic and commercial installations. The author's detailed but highly practical approach to the subject ensures there is sufficient information for students from both a craft background and those with more academic backgrounds to understand the material. This approach is complemented by straightforward, easy to use diagrams. Heating Services in Buildings supports a range of educational courses including degree level building services engineering, NVQ Level 4 Higher Professional Diploma in Building Services Engineering, City Guilds supplementary heating course and the Heating Design and Installation Course accredited by the European Registration Scheme (ERS).

*Air Conditioning* David Chadderton, 2014-05-09. David Chadderton's *Air Conditioning* is the complete introduction and reference guide for students and practitioners of air conditioning design, installation and maintenance. The scientific principles involved are introduced with the help of case studies and exercises and downloadable spreadsheets help you work through important calculations. New chapters on peak summertime air temperature in buildings without cooling systems, air duct acoustic calculations and air conditioning system cost enhance the usefulness to design engineers. Case studies are created from real life data including PROBE post occupancy reports relating all of the theoretical explanations to current practice. Trends and recent applications in lowering energy use by air conditioning are also addressed, keeping the reader informed of the latest sustainable air conditioning technologies. Over 75 multiple choice questions will help the reader check on their progress. Covering both tropical and temperate climates, this is the ideal book for those learning about the basic principles of air conditioning, seeking to understand the latest technological developments or maintaining a successful HVAC practice anywhere in the world.
