## **Elevator Technology:**

**Intelligent Building Systems** Albert Ting-pat So, Wai Lok Chan, 2012-12-06 Intelligent building is the future of our building industry all commercial residential industrial and institutional buildings will be designed towards the goal of intelligent buildings The most important aspect of an intelligent building is the building systems such as electrical services heating ventilation and air conditioning systems vertical transportation systems and life safety systems which must operate intelligently and efficiently to enhance the activities of the occupants Intelligent Building Systems explains what already exists in a modern intelligent building and describes what is currently being developed by researchers to improve human comfort working efficiency and energy performance for buildings in the 21st century Intelligent Building Systems is divided into three parts The first part gives a quick review of the structure terminology layout and operating principles of most standard modern building systems The second part introduces the background material necessary to understand intelligent building systems including information on electronics technology fundamental mathematics and techniques in artificial intelligence and signal processing These first two parts are the foundation for the final part which consists of research works carried out by the authors and other researchers in the application of artificial intelligence to building systems The technologies presented will encourage readers to envision new and innovative ideas on possible future applications Intelligent Building Systems is relevant to practitioners and researchers in the area of architectural science and engineering electrical and mechanical services and intelligent buildings It may also be used as a text for advanced courses on the topic

**Elevator Traffic Handbook** Gina Barney, Lutfi Al-Sharif, 2003-09-02 Vertical transportation systems elevators lifts escalators and passenger conveyors are used in almost all buildings of more than a few stories high Traffic design and control namely the movement of people by natural and mechanical means need to be planned carefully as the costs of under or over provision are considerable and changes are not always possible The subject is covered in four sections The basic principles of circulation and an introduction to lifts are set out at the beginning and then traffic design methods are outlined followed by an examination of analysis and control The sections are complete in themselves and are presented in depth with worked examples and case studies as appropriate The latest analysis techniques are set out and the book is up to date with current technology The mathematics is simplified wherever possible and copious references are given for further study and examples The practising vertical transportation engineer involved with the sizing of a vertical transportation installation will find this an excellent and authoritative resource Other members of the design teams architects developers and owners will find the book a useful reference and the needs of researchers lecturers and students of the subject will also be satisfied by this simple presentation of the underlying theory The engineering aspects which fall into the areas of manufacturing and production are not covered but the practical constraints and considerations are indicated *International Encyclopedia of Transportation*, 2021-05-13 In an increasingly globalised world despite reductions in costs and time transportation has

become even more important as a facilitator of economic and human interaction this is reflected in technical advances in transportation systems increasing interest in how transportation interacts with society and the need to provide novel approaches to understanding its impacts This has become particularly acute with the impact that Covid 19 has had on transportation across the world at local national and international levels Encyclopedia of Transportation Seven Volume Set containing almost 600 articles brings a cross cutting and integrated approach to all aspects of transportation from a variety of interdisciplinary fields including engineering operations research economics geography and sociology in order to understand the changes taking place Emphasising the interaction between these different aspects of research it offers new solutions to modern day problems related to transportation Each of its nine sections is based around familiar themes but brings together the views of experts from different disciplinary perspectives Each section is edited by a subject expert who has commissioned articles from a range of authors representing different disciplines different parts of the world and different social perspectives The nine sections are structured around the following themes Transport Modes Freight Transport and Logistics Transport Safety and Security Transport Economics Traffic Management Transport Modelling and Data Management Transport Policy and Planning Transport Psychology Sustainability and Health Issues in Transportation Some articles provide a technical introduction to a topic whilst others provide a bridge between topics or a more future oriented view of new research areas or challenges The end result is a reference work that offers researchers and practitioners new approaches new ways of thinking and novel solutions to problems All encompassing and expertly authored this outstanding reference work will be essential reading for all students and researchers interested in transportation and its global impact in what is a very uncertain world Provides a forward looking and integrated approach to transportation Updated with future technological impacts such as self driving vehicles cyber physical systems and big data analytics Includes comprehensive coverage Presents a worldwide approach including sets of comparative studies and applications
