

# Cooling Theory Lectures Notes

Markus Hupfer and members of the team!

September 7, 2024

These are the notes for the first lecture, *Foundations of Cooling Theory*. These are generalised and give insights on problems for all of the cooling gases, from the perspective of the results on the lecture, the likely contribution to Cooling Theory and the needs of cooling and Power Performance at different operating states. I also used several other sources for additional insights such as Part II course book of Cambridge on Cooling Theory and Thermodynamic gas in Professor John White, and the gas cycle notes from a Cambridge PhD on Subsonic Transonic Compressor intake flow by Professor Tim Galloway. I also included some more recent literature such as Applied Maths for the Power Performance. The last sentence of the notes is based on Hugh Stewart's course notes, "Tough Road Ahead".

All numbers by these notes are my best!
