*Migration and Health: A Human Rights Perspective - Conference Insights and Beyond* Maria-Isabel Roldos, Allison Squires, Justine McGovern, Mira Goral, Noemi Rodriguez, June Townes, 2026-01-20 According to the World Health Organization over one billion people moved globally in the last decade and in the United States alone close to 46 million people reported being foreign born in 2021. Human mobility related topics are within the scope of health disparities research. The science of health disparities is to investigate the causes of gaps and differences in health outcomes among populations that experience a disadvantage. People who migrate or seek refugee status are rapidly becoming populations who experience or will experience a health disparity during their life course. People move for a variety of reasons such as seeking better jobs and access to better health care, running from famine, war or natural disasters and fleeing persecution. Human mobility also has an impact on systems, structures and the social ecology of societies. There are consequences to health and social outcomes among those experiencing mobility firsthand. Human Mobility is a global phenomenon and of great importance. One effort is the scholarship ignited by the City University of New York Institute for Health Equity (CIHE) Academic Summit of 2023 titled *Migration and Health: A Human Rights Perspective*. See here the Conference proceedings: [CIHE Events - Migration and Health Summit Proceedings](#). Many important and relevant topics were presented and more need to be explored. To this end, this Research Topic seeks to serve as a platform for a meaningful discussion of human mobility and its relation to health equity and health disparities, its causes, consequences, interactions with health equity and health disparities in a global context. This collection aims to showcase research perspectives and commentaries about human mobility and its relation to health disparities, health care, health equity, social justice, food security, environmental justice and more related topics. Considering these points, the key goal of the Research Topic is to share the research, scholarly work and knowledge presented during the aforementioned Summit and also welcome external

submissions beyond those presented in the Summit to generate further discussion among a wide audience This Research Topic seeks to collect manuscripts that focus on 1 Population health research that depicts populations and immigrant groups by sociodemographic descriptions and ancestry such as etiology studies that examine the determinants and pathways contributing to health disparities and or research that developed evidence based interventions to reduce health disparities focused on populations that experienced human mobility 2 Health services research focused on populations affected by human mobility 3 Methodological approaches that intersect individual behaviors family and community to study human mobility and health outcomes 4 Studies or commentaries about human mobility health barriers and facilitators in the healthcare sector or social safety networks 5 Policy papers that study the social and ecological context related to health and human mobility

*Investigating the Role of Microorganisms in Ecosystems and Their Interactions with the Humans, Animals, Plants, and Environment Interface* Juan M. Gonzalez ,Wen-Jun Li,2026-02-02 Please note that Systems Microbiology does not consider descriptive studies that are solely based on amplicon e.g 16S rRNA profiles unless they are accompanied by a clear hypothesis and experimentation and provide insight into the microbiological system or process being studied Microorganisms often overlooked due to their diminutive size play a pivotal role in the intricate tapestry of life on Earth Their ubiquitous presence in diverse ecosystems from the depths of oceans to the heights of mountains underscores their significance in shaping the planet s biogeochemical cycles and influencing the health and well being of all living organisms This research topic aims to delve into the multifaceted interactions between microorganisms and humans animals plants and environment interface shedding light on their ecological functions their impact on human health and their potential applications in sustainable development The research topic will employ a multidisciplinary approach integrating techniques from microbiology ecology genomics and environmental science By examining microbial communities in various ecosystems including soil water air and the human microbiome to investigate their taxonomic composition metabolic activities and functional roles Aid offered by advanced sequencing technologies helps to characterize microbial diversity and identify novel species with potential applications in biotechnology and medicine One key focus of this research will be to elucidate the role of microorganisms in nutrient cycling and bioremediation Microbes are essential for decomposing organic matter releasing nutrients that are vital for plant growth and ecosystem productivity They also play a crucial role in bioremediation a process that involves the use of microorganisms to clean up contaminated environments By understanding the microbial mechanisms involved in these processes we can develop a collection of articles on sustainable agriculture waste management and environmental restoration Another important aspect of this research topic is to explore the interactions between microorganisms and higher organisms Microbes can have profound effects on the health and behavior of animals and plants For example the human microbiome plays a critical role in digestion immune function and mental health Understanding these interactions can lead to new approaches for treating diseases and promoting human well being Additionally microorganisms can influence plant growth and productivity by promoting nutrient uptake protecting against pathogens and enhancing stress tolerance Furthermore this research topic gives insights into the impact of human activities on microbial communities such as antimicrobial resistance and their ecosystem functions Climate change pollution deforestation and urbanization are all disrupting ecosystems and altering microbial diversity By publishing research articles on the effects of these disturbances on microbial communities we can present collection articles that describe the

risks to ecosystem stability and develop strategies for conservation and mitigation In total this research topic aims to provide a comprehensive understanding of the role of microorganisms in ecosystems and their interactions with humans animals plants and environment interface By advancing our knowledge in this field we will have a collection of innovative solutions to pressing global challenges such as climate change food security and human health
