from simple file sharing email and messaging utilities in the past to the current situation where their improved technical capabilities and SLAs make running mission critical applications such as SAP possible. However, IT professionals must take due care when deploying SAP in a public private or hybrid cloud environment. As a foundation for core business operations, SAP cloud deployments must satisfy stringent requirements concerning their performance, scale, and security while delivering measurable improvements in IT efficiency and cost savings. The 2nd edition of *SAP on the Cloud* continues the work of its successful predecessor released in 2013, providing updated guidance for deploying SAP in public private and hybrid clouds. To do so, it discusses the technical requirements and considerations necessary for IT professionals to successfully implement SAP software in a cloud environment, including best practice architectures for IaaS, PaaS, and SaaS deployments. The section on SAP's in-memory database HANA has been significantly extended to cover Suite on HANA, SoH, and the different incarnations of HANA Enterprise Cloud, HEC, and Tailored Datacenter Integration, TDI. As cyber threats are a significant concern, it also explores appropriate security models for defending SAP cloud deployments against modern and sophisticated attacks.
