Robust Control for Unstructured Perturbations — An Introduction Peter Dorato, Luigi Fortuna, G. Muscato, 1992 These lecture notes focus on the synthesis of robust controllers for feedback systems in the presence of unstructured perturbations It is assumed as a prerequisite that the reader is familiar with the basic linear system and automatic control concepts In part I interpolation theory is used to solve various single input single output SISO robust control problems While the interpolation approach is awkward for multivariable systems it provides a very natural and simple approach for SISO systems In particular the interpolation approach requires only elementary knowledge of complex variables and provides a great deal of physical insight into various robust control problems The required interpolation theory is developed in some detail Part II is devoted to multivariable systems Two approaches are outlined the Hankle norm approach and the two Riccati equation approach In this part only a limited number of results are proven However MATLAB software is presented for numerical solution The book is addressed to researchers practicing engineers and students who wish to get an introduction to robust control theory for unstructured plant perturbations The organization of the book as lecture notes and the presence of examples and of exercises at the end of many chapters allow to use the book as an introductory text in Robust Control courses
