Animal Reproduction ,2022-05-25 Reproduction is the backbone of animal based food production The reproductive systems of animals vary and are species dependent In this regard all terrestrial animals perform internal fertilization whereas aquatic animals perform different reproductive strategies such as internal fertilization without mating external fertilization viviparous oviparous and parthenogenesis Today reproductive biotechnology is an important part of the conservation and propagation of animals This book addresses several hot topics in the field of reproduction of terrestrial and aquatic animals Over five sections and eight chapters this volume examines subjects such as cryopreservation embryo transfer avian reproduction intraovarian gestation and more *Reproductive biotechnologies and challenges in their application* Stefan Gregore Ciornei, Mihai Cenariu,Graça Lopes,2025-02-14 Animal reproductive biotechnologies encompass a diverse array of scientific techniques aimed at improving livestock breeding enhancing animal health and conserving endangered species These technologies include artificial insemination AI embryo transfer ET cloning and gene editing By leveraging these methods researchers and farmers can enhance desirable traits in livestock such as disease resistance meat quality and milk production thereby increasing agricultural productivity and food security Additionally in conservation efforts reproductive biotechnologies play a crucial role in preserving genetic diversity and restoring populations of endangered species However the application of these technologies faces numerous challenges including infertility ethical concerns surrounding animal welfare genetic modification and the potential environmental impact of genetically modified organisms Furthermore regulatory frameworks vary across regions and species posing obstacles to the widespread adoption of these technologies Addressing these challenges is essential for ensuring the responsible use of animal reproductive biotechnologies while maximizing their potential benefits for agriculture and conservation efforts The research topic Animal Reproductive biotechnologies and challenges in their application addresses the significant problem of animal infertility which poses considerable challenges in agricultural production breeding programs and conservation efforts One key aspect to address this issue involves leveraging reproductive biotechnologies to overcome infertility barriers in various animal species Advanced techniques such as in vitro fertilization IVF intracytoplasmic sperm injection ICSI and embryo transfer ET offer promising solutions for assisting animals with reproductive challenges Recent advances in reproductive biotechnologies include the development of improved culture media for embryo development optimization of cryopreservation techniques for gametes and embryos and the application of genomics to identify genetic markers associated with fertility traits Additionally research efforts focus on understanding the underlying causes of infertility in animals including genetic environmental and physiological factors to develop targeted interventions and management strategies By integrating scientific advancements

with comprehensive management approaches researchers aim to enhance fertility outcomes in animals and thereby improve agricultural productivity breeding efficiency and the conservation of endangered species

Genomic, Proteomics, and Biotechnology RC Sobti, Manishi Mukesh, Aastha Sobti, 2022-12-29 High throughput molecular technologies omics can help to decipher the contributions of different physiological systems and identify candidate molecules that are representative of different physiological pathways thereby allowing the discovery of biomarkers Notably the omics technologies along with and computational methods bioprospecting and artificial intelligence will continue to lead to better understanding of biological mechanisms that are responsible for physical attributes or phenotypes Research breakthroughs obtained through these technologies can be used to enhance productivity of food animals meet the increasing demand for animal sourced foods enhance high quality nutrient availability ensure nutrient safety mitigate the effects of climate variability and result in new technologies that provide continued improvement in food security worldwide Such breakthroughs are an urgent necessity because over the past 50 years there has been an unprecedented increase in the world's population which will reach ten billion by the year 2050 Innovative and technological advancements that enhance all aspects of food production will arise from basic fundamental research Besides food animal by products have found many applications in the fields of pharmaceuticals cosmetics and household and industrial products Hence the need to ameliorate the productivity reproductivity growth performance and disease resistance in animals has created a worldwide interest in gaining a deeper understanding of animal biology biotechnology and genomics and proteomics The present volume thoroughly discusses the omics studies in domestic and non domestic animals and their role in mitigation of various challenges ahead The volume thus focuses on i Omics genomics proteomics transcriptomics metabolonomics technologies in identifying characterizing biodiversity ii Role of molecular techniques for improvement of domestic and non domestic organisms iii Animal and alternative model systems using stem cells tissue engineering cell free systems 3D platforms etc for studying life phenomena iv Genetically modified organisms as factories for the products

Animal production and animal science worldwide A. Rosati, A. Tewolde, C. Mosconi, 2023-08-28 After the experience of the first volume The World Association for Animal Production WAAP continues the publication of the Book of the Year series for the benefit of animal scientists and policy makers in the field of livestock systems The WAAP asked the best known and significant animal scientists in the world to contribute to the preparation of this book Following the success of the first volume of the series the WAAP Book of the Year 2003 many authors from the six continents are contributing to this 2nd volume The importance of this publication is to have already established a worldwide reference for the animal science and production sectors There are the usual four sections that raised much interest in the previous volume of the series The first section has six articles describing the changing conditions of livestock systems in each of the six continents The second section has more than twenty papers describing the development of the many sectors in which the animal science field has been divided The third section dealing with

contemporary issues is declared by our readers to be the most interesting It allows participating authors to describe current and significant issues important in these last years for the animal science and production sectors The statistics produced in the previous volume are updated and enhanced with new figures in this book to form the fourth section The papers included in this book speak clearly of the development in the last twelve months in the livestock systems worldwide Major space is also devoted to the list of references from where every author can start to deepen his knowledge This book is essential for libraries that want their readers to be easily updated Also scientists policy makers and scientific writers who need to enhance their competence to have the most practical way of knowing what is going on in the world in the field of livestock science and production will find this book of great value

From the First Artificial Insemination to the Modern Reproduction Biotechnologies : Traditional Ways and New Frontiers of Animal Production : Reggio Emilia, October 8-9, 1999 : Proceedings [sic] of the International Symposium ,1999 **Animal Biotechnology** L.A. Babiuk, J.P. Phillips, Murray Moo-Young, 2013-10-22 The advent of biotechnology has the potential to develop a variety of novel or better quality products for the treatment of a large number of

diseases in livestock In addition as we understand more about the reproductive physiology of animals the potential exists to dramatically increase the productivity of animals through better therapeutics and diagnostics for the control of many infectious diseases Productivity can also be increased through animal breeding strategies including gene transfer micromanipulation of embryos and gamete sex selection As well as being a valuable reference to current knowledge in these areas this first supplement to Comprehensive Biotechnology also looks at societal concerns over the use of antibiotics and chemical residues in meat and milk products which are forcing biotechnologists to investigate more natural means of controlling infection by stimulating the animal s own immune system to combat infection The identification of a variety of cytokines which are involved in regulating immune responses provides opportunities to use the animal s natural defence mechanisms to combat many infections or increase the animal s resistance to such infections These approaches should provide tools for eventual elimination of specific diseases from counties regions or whole continents
