together should form the basis of a first course in computing using Java While I have generally followed the guidelines of the College Board recommendations for the APCS AB advanced placement course I have not attempted to be encyclopedic We will see int double char etc but no attempt was made to provide all the rules and caveats of such things Many books that call themselves text books seem to me to be instead reference works with everything gathered together nicely to ease looking up information rather than books to learn from Instead I have attempted to show for the most part how the features of Java are used to build real programs This is a book about writing programs including some quite interesting and difficult programs You may struggle with some of this material but the struggle will take you to a better place I hope you agree that it is worth the work you will put in to it   **Java** Byron Weber Becker,2007 JAVA LEARNING TO PROGRAM WITH ROBOTS is an innovative approach to teaching and learning introductory object oriented programming Students are introduced to object oriented concepts with simulated robots a hands on approach that is engaging and fun for both students and instructors Robots are used to lay a solid object oriented foundation upon which students build an in depth understanding of programming concepts using a wide range of non robotic examples The robots approach has been successfully used for nearly six years at the University of Waterloo and has introduced more than 6 000 students to OO programming using Java   Introduction to Robotics James A.
