

Chapter 29: Introduction to Animal Physiology

River Salmon Life Cycle

- Fish travel from freshwater to salt water but return to rivers in which they were born to lay their eggs
- They swim against the river current and overcome obstacles
- Turn red when they go home
- Male and female die and decay leaving nutrients for their young

Noble Prize for Physiology or Medicine

- Importance: they are put in same category because you have to understand animal physiology to properly study and practice medicine.

Animal characteristics:

- **Not unique** to animals (fungi 3 and plants 2)
 - o **Eukaryotes**: cells have nuclei with membrane around it, ER, mitochondria
 - o **Heterotrophic**: get nutrients from other organisms
 - o **Multicellular**: body made up of multiple cells and differentiated tissues
- Unique to animals (sponges don't have both)
 - o Muscles: allow them to move, quickly generate forces through specialized cells
 - o Neuronal signaling: sense stimuli in the environment and react to them, neurons to control those muscles

Evolution of Natural Selection

Most animals are small and don't have backbone

Tradeoffs: not unique to animals

- As you optimize something for one function you reduce ability for another thing

Mechanism: describes how something works, the cause of a structure or behavior

- Shaped by evolution
- Close link between animal form and function
 - o Evolution puts constraint on animal's form and function
 - Can't engineer from scratch, only tinker with preexisting structures
- Are rarely optimal due to tinkering

Francois Jacob: Evolution and Tinkering (1977)

- Tinkerers who tackle same problems are likely to end up with different solution
 - o Example: fish developed different mechanisms by which to acquire oxygen, some gulped air while other developed structure to adapt to places with low oxygen levels
 - o Tarpon gulps air, specialized swim bladder
 - o Ornamental pet fish, gill chambers

Animal Physiology Lecture Notes
