

Parametric vs. Non-Parametric Tests

Parametric Tests

Assumptions

- Normality
- Homogeneity of variance
- Independence

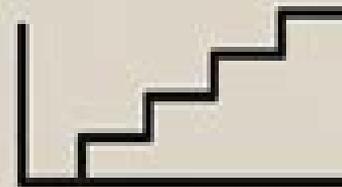

Examples

- T-tests
- ANOVA
- Pearson correlation

Non-Parametric Tests

When to Use

- Data is not normally distributed
- Small sample size
- Ordinal/nominal data
- Presence of outliers

Examples

- Mann-Whitney U test
- Wilcoxon signed-rank test
- Kruskal-Wallis test
- Spearman's rank correlation

Estimating Dynamic Economic Models With Non Parametric:

Applied Nonparametric Econometrics Daniel J. Henderson, Christopher F. Parmeter, 2015-01-12 The majority of empirical research in economics ignores the potential benefits of nonparametric methods while the majority of advances in nonparametric theory ignore the problems faced in applied econometrics This book helps bridge this gap between applied economists and theoretical nonparametric econometricians It discusses in depth and in terms that someone with only one year of graduate econometrics can understand basic to advanced nonparametric methods The analysis starts with density estimation and motivates the procedures through methods that should be familiar to the reader It then moves on to kernel regression estimation with discrete data and advanced methods such as estimation with panel data and instrumental variables models The book pays close attention to the issues that arise with programming computing speed and application In each chapter the methods discussed are applied to actual data paying attention to presentation of results and potential pitfalls

Applied Bayesian Modelling Peter Congdon, 2014-05-23 This book provides an accessible approach to Bayesian computing and data analysis with an emphasis on the interpretation of real data sets Following in the tradition of the successful first edition this book aims to make a wide range of statistical modeling applications accessible using tested code that can be readily adapted to the reader's own applications The second edition has been thoroughly reworked and updated to take account of advances in the field A new set of worked examples is included The novel aspect of the first edition was the coverage of statistical modeling using WinBUGS and OPENBUGS This feature continues in the new edition along with examples using R to broaden appeal and for completeness of coverage

[Inferences from Parametric and Non-parametric Covariance Matrix Estimation Procedures](#) Wouter J. Den Haan, Andrew T. Levin, 1996 In this paper we propose a parametric spectral estimation procedure for constructing heteroskedasticity and autocorrelation consistent HAC covariance matrices We establish the consistency of this procedure under very general conditions similar to those considered in previous research and we demonstrate that the parametric estimator converges at a faster rate than the kernel based estimators proposed by Andrews and Monahan 1992 and Newey and West 1994 In finite samples our Monte Carlo experiments indicate that the parametric estimator matches and in some cases greatly exceeds the performance of the prewhitened kernel estimator proposed by Andrews and Monahan 1992 These simulation experiments illustrate several important limitations of non parametric HAC estimation procedures and highlight the advantages of explicitly modeling the temporal properties of the error terms Wouter J den Haan Andrew Levin Depa

Analysis of Panel Data Cheng Hsiao, 2022-07-07 Now in its fourth edition this comprehensive introduction of

fundamental panel data methodologies provides insights on what is most essential in panel literature A capstone to the forty year career of a pioneer of panel data analysis this new edition s primary contribution will be the coverage of advancements in panel data analysis a statistical method widely used to analyze two or higher dimensional panel data The topics discussed in early editions have been reorganized and streamlined to comprehensively introduce panel econometric methodologies useful for identifying causal relationships among variables supported by interdisciplinary examples and case studies This book to be featured in Cambridge s Econometric Society Monographs series has been the leader in the field since the first edition It is essential reading for researchers practitioners and graduate students interested in the analysis of microeconomic behavior

Chaos and Non-linear Models in Economics John Creedy, Vance Martin, 1994 Non linear models are increasingly being applied to phenomena that are otherwise very difficult to model such as financial markets economic growth agricultural price cycles business cycles diffusion processes and overlapping generation models Chaos and Non Linear Models in Economics makes important advances in the theory and application of non linear modelling accessible to advanced students The contributions to this volume include both introductory chapters which review the fundamental theoretical and statistical characteristics of non linear models and keep the use of mathematics to a minimum and chapters which introduce more sophisticated techniques

Journal of the American Statistical Association, 2007 A scientific and educational journal not only for professional statisticians but also for economists business executives research directors government officials university professors and others who are seriously interested in the application of statistical methods to practical problems in the development of more useful methods and in the improvement of basic statistical data

Reviews in Public Health Expenditure and Performance Hai Fang, 2025-04-11 Effective allocation and utilization of resources are fundamental to achieving optimal public health outcomes Health economics provides valuable insights into how financial resources are allocated across different healthcare sectors and their subsequent effects on health indicators and health related quality of life By conducting in depth reviews of existing research and policy evaluations on public health expenditure and their performance this Research Topic aims to shed light on best practices challenges and innovative approaches to optimize public health expenditure for maximum impact Potential topics for review articles may include but are not limited to Review of health economic evaluation methods applied to public health interventions including cost effectiveness cost benefit cost utility analyses and budget impacts Assessment of the relationship between public health expenditure and health outcomes including the impact on disease prevention healthcare access and quality of life Evaluation of health financing systems and their influence on healthcare equity and affordability with a focus on vulnerable and marginalized populations Analysis of the role of public private partnerships in healthcare funding and

service delivery to enhance overall health system performance Review of healthcare budget allocation strategies and their implications for resource allocation in different public health domains Exploration of innovative financing mechanisms such as social impact bonds and health insurance schemes to improve healthcare accessibility and efficiency Critique of policy interventions aimed at optimizing public health expenditure and enhancing performance in healthcare service delivery
