

Global Climate Change

What evidence have scientists gathered to support global climate change?

Key:

Scientists measure energy that is leaving the atmosphere (terrestrial radiation) and the combination of solar energy (incoming) and Earth's own energy (terrestrial radiation) that leaves the atmosphere (outgoing longwave radiation) and use them to determine the temperature of the atmosphere. The difference between the two is the energy that is being absorbed by the atmosphere.

- Graph 2 shows that the Earth's surface temperature is increasing.

2. Describe the relationship:
