According to Varma and Vedanayagam (2007) the study of geography has not been always highly valued. It is explained that geography has been traditionally considered as a subject necessary for the support of other disciplines (Varma and Vedanayagam 2007). Through the decades the power of geography as part of the curriculum has been increased (Varma and Vedanayagam 2007). Today, geography has become an independent science, keeping its role in explaining issues related to other sciences (Varma and Vedanayagam 2007). In certain cases, the analysis of the role of geography can be quite difficult since the characteristics of geography, as a scientific field of knowledge, are not clear. In practice, it has been proved that geography is related 'both to physical sciences and to social sciences' (Varma and Vedanayagam 2007, p.28). In any case, geography helps to understand 'the economic, natural and cultural environment of humans' (Varma and Vedanayagam 2007, p.28). This means that geography is related to all aspects of human life, being valuable in the explanation of human history and the development of effective decisions related to a country's political and economic challenges.

From a similar point of view, Basha (2004) notes that 'geography, as a subject, can be characterized as descriptive' (Basha 2004, p.284). Indeed, through geography the characteristics and the position of specific areas have been analytically described (Basha 2004). It is further explained that through the decades the above role of geography had to change (Basha 2004). The need for 'the co-relation between geography and other subjects has become emergent' (Basha 2004, p.284). The above phenomenon has been expanded under the pressures for rapid explanations in regard to various social and economic phenomena. It has been proved that geography could help other subjects to become more familiar to people, at the level that the terms of geography, as a science, are easier to understand compared to
