③ We know  $T = \frac{1}{2} \vec{\omega} \cdot \vec{L} = \frac{1}{2} \vec{\omega} \cdot \vec{I} \cdot \vec{\omega}$

$$\frac{dT}{dt} = \frac{1}{2} \frac{d(\vec{\omega} \cdot \vec{L})}{dt} = \frac{1}{2} \frac{d\vec{\omega}}{dt} \cdot \vec{L} + \frac{1}{2} \vec{\omega} \cdot \frac{d\vec{L}}{dt}$$

Torque

$$\vec{N} \equiv \frac{d\vec{L}}{dt}$$

$$\frac{dT}{dt} = \frac{1}{2} \vec{\omega} \cdot \vec{N} + \frac{1}{2} \frac{d\vec{\omega}}{dt} \cdot \vec{L}$$

Note: In principal axes system-

$$\vec{\omega} = \omega_1 \hat{e}_1 + \omega_2 \hat{e}_2 + \omega_3 \hat{e}_3$$

$$\vec{L} = I_1 \omega_1 \hat{e}_1 + I_2 \omega_2 \hat{e}_2 + I_3 \omega_3 \hat{e}_3$$

$$\frac{d\vec{L}}{dt} = \frac{d\omega_1}{dt} \hat{e}_1 + \frac{d\omega_2}{dt} \hat{e}_2 + \frac{d\omega_3}{dt} \hat{e}_3$$

$$\frac{d\vec{\omega}}{dt} \cdot \vec{L} = I_1 \omega_1 \frac{d\omega_1}{dt} + I_2 \omega_2 \frac{d\omega_2}{dt} + I_3 \omega_3 \frac{d\omega_3}{dt}$$

$$\equiv \frac{d\vec{L}}{dt} \cdot \vec{\omega} = \vec{N} \cdot \vec{\omega}$$

$$\Rightarrow \frac{dT}{dt} = \frac{1}{2} \vec{\omega} \cdot \vec{N} + \frac{1}{2} \vec{\omega} \cdot \vec{N} = \boxed{\vec{N} \cdot \vec{\omega} = \frac{dT}{dt}}$$

## Goldstein Chapter 5 Solutions:

**Introduction to Interactive Boundary Layer Theory** Ian John Sobey, 2000 One of the major achievements in fluid mechanics in the last quarter of the twentieth century has been the development of an asymptotic description of perturbations to boundary layers known generally as triple deck theory These developments have had a major impact on our understanding of laminar fluid flow particularly laminar separation It is also true that the theory rests on three quarters of a century of development of boundary layer theory which involves analysis experimentation and computation All these parts go together and to understand the triple deck it is necessary to understand which problems the triple deck resolves and which computational techniques have been applied This book presents a unified account of the development of laminar boundary layer theory as a historical study together with a description of the application of the ideas of triple deck theory to flow past a plate to separation from a cylinder and to flow in channels The book is intended to provide a graduate level teaching resource as well as a mathematically oriented account for a general reader in applied mathematics engineering physics or scientific computation

*Physical Chemistry for the Biosciences* Raymond Chang, 2005-02-11 This book is ideal for use in a one semester introductory course in physical chemistry for students of life sciences The author's aim is to emphasize the understanding of physical concepts rather than focus on precise mathematical development or on actual experimental details Subsequently only basic skills of differential and integral calculus are required for understanding the equations The end of chapter problems have both physiochemical and biological applications

Computational Heat Transfer Yogesh Jaluria, 2017-10-19 This new edition updated the material by expanding coverage of certain topics adding new examples and problems removing outdated material and adding a computer disk which will be included with each book Professor Jaluria and Torrance have structured a text addressing both finite difference and finite element methods comparing a number of applicable methods

**Handbook of Ethics in Quantitative Methodology** A. T. Panter, 2011-03-01 This comprehensive Handbook is the first to provide a practical interdisciplinary review of ethical issues as they relate to quantitative methodology including how to present evidence for reliability and validity what comprises an adequate tested population and what constitutes scientific knowledge for eliminating biases The book uses an ethical framework that emphasizes the human cost of quantitative decision making to help researchers understand the specific implications of their choices The order of the Handbook chapters parallels the chronology of the research process determining the research design and data collection data analysis and communicating findings Each chapter Explores the ethics of a particular topic Identifies prevailing methodological issues Reviews strategies and approaches for handling such issues and their ethical implications Provides one or more case examples Outlines plausible approaches to the issue including best practice solutions Part 1 presents ethical frameworks that cross cut design analysis and modeling in the behavioral sciences Part 2 focuses on ideas for disseminating ethical training in statistics courses Part 3 considers the ethical aspects of

selecting measurement instruments and sample size planning and explores issues related to high stakes testing the defensibility of experimental vs quasi experimental research designs and ethics in program evaluation Decision points that shape a researchers approach to data analysis are examined in Part 4 when and why analysts need to account for how the sample was selected how to evaluate tradeoffs of hypothesis testing vs estimation and how to handle missing data Ethical issues that arise when using techniques such as factor analysis or multilevel modeling and when making causal inferences are also explored The book concludes with ethical aspects of reporting meta analyses of cross disciplinary statistical reform and of the publication process This Handbook appeals to researchers and practitioners in psychology human development family studies health education sociology social work political science and business marketing This book is also a valuable supplement for quantitative methods courses required of all graduate students in these fields

**Introduction to Computational Biology** Michael S. Waterman, 1995-06-01 Biology is in the midst of a era yielding many significant discoveries and promising many more Unique to this era is the exponential growth in the size of information packed databases Inspired by a pressing need to analyze that data Introduction to Computational Biology explores a new area of expertise that emerged from this fertile field the combination of biological and information sciences This introduction describes the mathematical structure of biological data especially from sequences and chromosomes After a brief survey of molecular biology it studies restriction maps of DNA rough landmark maps of the underlying sequences and clones and clone maps It examines problems associated with reading DNA sequences and comparing sequences to finding common patterns The author then considers that statistics of pattern counts in sequences RNA secondary structure and the inference of evolutionary history of related sequences Introduction to Computational Biology exposes the reader to the fascinating structure of biological data and explains how to treat related combinatorial and statistical problems Written to describe mathematical formulation and development this book helps set the stage for even more truly interdisciplinary work in biology

*Topics in Ordinary Differential Equations* William D. Lakin, David A. Sánchez, 1982 The Interaction of Short-wavelength Internal Waves with a Background Current Dave Broutman, 1982 Two approaches are used to explore the effects of shear on short wavelength internal waves In the first the Taylor Goldstein equation is solved exactly The solutions reveal the inaccuracy of WKB predictions when applied to a curved velocity profile with a minimum Richardson number of order unity To investigate internal waves in an inertial current ray calculations are made This second approach reveals that the process of refractive convergence which includes the critical layer interaction as a special case operates at virtually all phases of the inertial oscillation and affects short waves of nearly all frequencies It is also found in contrast to the results of steady shear analyses that short waves with phase speeds less than the mean flow maximum can propagate for several inertial periods without becoming unstable and conversely that waves with initial phase speeds of two or three times the mean flow maximum can quickly become focussed to unstably high amplitudes The final section examines the mean flow

induced by three dimensional low frequency internal wave packets Rotation alters the character of the flow so that the mean momentum is not equal to  $E/c$  where  $c$  is the horizontal phase speed of the short waves and  $E$  is the intrinsic energy density The generation of inertial waves by the internal wave field as found by Hasselmann 1970 for a wave field that is statistically homogeneous in the horizontal is not predicted by a calculation that incorporates horizontal variations
