## How MOCVD Aixtron:

**Recent Developments in Superconductivity Research** Barry P. Martins, 2007 Superconductivity is the ability of certain materials to conduct electrical current with no resistance and extremely low losses. High temperature superconductors such as  $\text{La}_2\text{xSr}_x\text{CuO}_x$  ( $T_c$  40K) and  $\text{YBa}_2\text{Cu}_3\text{O}_{7-x}$  ( $T_c$  90K) were discovered in 1987 and have been actively studied since. In spite of an intense world wide research effort during this time a complete understanding of the copper oxide cuprate materials is still lacking. Many fundamental questions are unanswered particularly the mechanism by which high  $T_c$  superconductivity occurs. More broadly the cuprates are in a class of solids with strong electron-electron interactions. An understanding of such strongly correlated solids is perhaps the major unsolved problem of condensed matter physics with over ten thousand researchers working on this topic. High  $T_c$  superconductors also have significant potential for applications in technologies ranging from electric power generation and transmission to digital electronics. This ability to carry large amounts of current can be applied to electric power devices such as motors and generators and to electricity transmission in power lines. For example superconductors can carry as much as 100 times the amount of electricity of ordinary copper or aluminium wires of the same size. Many universities, research institutes and companies are working to develop high  $T_c$  superconductivity applications and considerable progress has been made. This volume brings together new leading edge research in the field.

**III-Nitrides Light Emitting Diodes: Technology and Applications** Jinmin Li, Junxi Wang, Xiaoyan Yi, Zhiqiang Liu, Tongbo Wei, Jianchang Yan, Bin Xue, 2020-08-31 The book provides an overview of III nitride material based light emitting diode LED technology from the basic material physics to the latest advances in the field such as homoepitaxy and heteroepitaxy of the materials on different substrates. It also includes the latest advances in the field such as approaches to improve quantum efficiency and reliability as well as novel structured LEDs. It explores the concept of material growth, chip structure, packaging, reliability and application of LEDs. With spectra coverage from ultraviolet (UV) to entire visible light wavelength the III nitride material based LEDs have a broad application potential and are not just limited to illumination. These novel applications such as health, medical, visible light communications, fishery and horticulture are also discussed in the book.

**Microscopy of Semiconducting Materials 2001** A.G. Cullis, 2018-01-18 The Institute of Physics Conference Series is a leading international medium for the rapid publication of proceedings of major conferences and symposia reviewing new developments in physics and related areas. Volumes in the series comprise original refereed papers and are regarded as standard referee works. As such they are an essential part of major library collections worldwide. The twelfth conference on the Microscopy of Semiconducting Materials (MSM) was held at the University of Oxford 25-29 March 2001. MSM conferences focus on recent international advances in semiconductor studies carried out by all forms of microscopy. The event was organized with scientific sponsorship by the Royal Microscopical Society, The Electron Microscopy and Analysis Group of the Institute of Physics and the Materials Research Society. With the continual shrinking of electronic device dimensions and

accompanying enhancement in device performance the understanding of semiconductor microscopic properties at the nanoscale and even at the atomic scale is increasingly critical for further progress to be achieved This conference proceedings provides an overview of the latest instrumentation analysis techniques and state of the art advances in semiconducting materials science for solid state physicists chemists and materials scientists The Physics of Semiconductor Devices R. K. Sharma,D.S. Rawal,2019-01-31 This book disseminates the current knowledge of semiconductor physics and its applications across the scientific community It is based on a biennial workshop that provides the participating research groups with a stimulating platform for interaction and collaboration with colleagues from the same scientific community The book discusses the latest developments in the field of III nitrides materials devices compound semiconductors VLSI technology optoelectronics sensors photovoltaics crystal growth epitaxy and characterization graphene and other 2D materials and organic semiconductors **Epitaxy** Marian A.
