Properties of Matter

Introduction

Are you able to distinguish between two substances by touch?

- Why are cooking, clothes, and furniture grouped together?
- Why are diamonds and iron nails grouped together?

What Are Physical Properties?

Look at the table in the diagram below to learn about its characteristics. Fill in the blanks with the correct properties.

A physical property is a characteristic that can be observed without changing the identity of the substance. Most of the properties of an object can only be observed. For example, you can observe an object's colour, texture, shape, size, or weight. In general, the properties of an object are determined by the properties of the materials the object is made of.

Many of the physical properties of materials that make up objects can be measured. These properties include weight, hardness, magnetism, and the ability to conduct heat and electricity.

Some physical properties depend on how much of a material you have. In other words, a large amount of a material may have different properties from a smaller amount of the material. Other physical properties do not depend on how much of the material you have. They show that no matter how large or small something is, it has the same physical property or always has more

Learning Outcome

Identify the correct use of materials in various products and determine the properties of materials used in different situations.

Learning Outcome
