Xylem and Phloem are vascular tissues that facilitate the transport of materials between the roots and shoots of plants.

There are two major transport compartments through plants: the apoplast and the symplast

- Apoplast → everything external to the plasma membrane of living cells
  - Includes: cell walls, extracellular spaces, and the interior of dead cells
    - Pathway outside of the living cells
- Symplast → the cytosol of all the living cells in plant as well as the plasmodesmata (interconnecting channels)
  - Pathway inside the living cells
- Transmembrane routes → via the water transport
  - Pathway inside and outside the living cells

3 different routes of transport

- Apoplastic route → water and solutes move outside of the living cells
- Symplastic route → water and solutes move inside of the living cells
- Transmembrane route → water and solutes move outside AND inside of the living cells

The apoplast in plant tissues may include which of the following?

Transport in the plant body occurs by 2 mechanisms
