Chapter 3 Model Development And Simulation:

Modeling and Simulation Hartmut Bossel, 2018-10-08 Models and simulations of all kinds are tools for dealing with reality. Humans have always used mental models to better understand the world around them to make plans to consider different possibilities to share ideas with others to test changes and to determine whether or not the development of an idea is feasible. The book *Modeling and Simulation* uses exactly the same approach except that the traditional mental model is translated into a computer model and the simulations of alternative outcomes under varying conditions are programmed on the computer. The advantage of this method is that the computer can track the multitude of implications and consequences in complex relationships much more quickly and reliably than the human mind. This unique interdisciplinary text not only provides a self-contained and complete guide to the methods and mathematical background of modeling and simulation software SIMPAS and a collection of 50 systems models on an accompanying diskette. Students from fields as diverse as ecology and economics will find this clear interactive package an instructive and engaging guide.

Guide to Distributed Simulation with HLA Okan Topçu, Halit Oğuztüzün, 2017-07-27 This invaluable textbook reference provides a hands on guide to the application of good software development practices to the construction of distributed simulation systems with a particular focus on High Level Architecture HLA. Emphasizing a learning by doing approach supported by examples the text offers practical advice on real world development issues for all engineers and programmers entering the field. Topics and features explains how to rapidly develop an HLA federation offering an implemented sample for each service area of the HLA federate interface specification describes this implementation using the freely available software tools SimGe and RACoN provides numerous step by step examples code snippets and case studies as well as links to downloadable sample source code uses the Microsoft NET platform and the C programming language in all examples and case studies includes review questions throughout the book for further study examines not only federate application development but also object model construction discusses the employment of HLA in multi agent simulations. Providing an accessible introduction and all in one resource for HLA based distributed simulation development this book is an essential guide for students and practitioners training in distributed simulation and distributed interactive simulation.

Modeling and Simulation of Complex Systems Robert Siegfried, 2014-10-08 Robert Siegfried presents a framework for efficient agent based modeling and simulation of complex systems. He compares different approaches for describing structure and dynamics of agent based models in detail. Based on this evaluation the author introduces the General Reference Model for Agent based Modeling and Simulation GRAMS. Furthermore he presents parallel and distributed simulation approaches for execution of agent based

models from small scale to very large scale The author shows how agent based models may be executed by different simulation engines that utilize underlying hardware resources in an optimized fashion Development of a MATLAB/Simulink Framework for Phasor-Based Power System Simulation and Component Modeling Based on State Machines Dirk Fetzer,2018-12-05 Im ersten Teil dieser Arbeit wird ein Algorithmus vorgestellt der spannungsabh ngige Einspeisung von Wirk und Blindleistung in den Lastfluss Algorithmus integriert Es wird eine Beschleunigung von bis zu einer Gr enordnung gegen ber dem derzeit g ngigen Verfahren und eine verbesserte Robustheit erreicht Im zweiten Teil wird ein Phasor Framework zur dynamischen Simulation von Stromnetzen vorgestellt Die wesentliche Neuheit ist die M glichkeit der Integration von Zustandsdiagrammen direkt in die Komponentenmodelle Damit wird eine wesentlich schnellere Modellentwicklung erm glicht als mit verf gbaren Tools Im dritten Teil werden Modelle entwickelt und in das Framework integriert Der Schwerpunkt liegt auf einem Photovoltaik Modell welches das dynamische P V Q V und P f Verhalten nach VDE 4105 im Bereich Sekunden bis Minuten abbildet Im vierten Teil wird das entwickelte Phasor Framework verwendet um das Wiederschaltverhalten von Photovoltaikanlagen in einem dieselbetriebenen Inselnetz in der Niederspannung zu untersuchen Die Untersuchung zeigt dass ein periodisches Ab und Abschalten von Photovoltaikanlagen vorkommen kann
