What is needed to carry out "heating under reflux"? - correct answer

✓Equipment: Vertical condenser (clamps etc), Pear-shaped flask, antibumping granules, grease/vaseline and a heat source

Antibumping granules-used to make the liquid boil calmly and prevent bumping, bubbles and liquid from being expelled.

Vaseline-Makes the join airtight and prevents them from freezing in certain reactions

How do you carry out "heating under reflux"? - correct answer ✓Set up the equipment as shown in the diagram.

Add the reaction mix into the flask with antibumping granules.

Add grease/vaseline between the flask and condenser joint.

Clamp the flask/condenser joint to ensure it doesn't fall.

Connect the tubing (water in at the bottom out on top) and start the reflux.

What is the purpose of reflux? - correct answer ✓It enables a liquid to be continually boiled whilst the reaction takes place. This prevents volatile components from escaping and the flask boiling dry.

The vapour rises in the inner tube till it meets the outer tube containing cold water.

The vapour condenses and drips back into the flask.
