Managerial Economics & Organizational Architecture James A. Brickley, Clifford Smith, Jerold L. Zimmerman, 2007 With two distinct objectives this text's approach to managerial economics takes models from recent economics research and applies the research to the internal structure of a firm After teaching basic applied economics the authors look inside the firm and apply this analysis to management decision making Authors Brickley Smith and Zimmerman contend that organizational architecture consists of three aspects of corporate organization the assignment of decision rights within the company methods of rewarding individuals the structure of systems to evaluate the performance of both individuals and business units

These three components can be likened to a stool with three legs. If one of the legs is shorter, the stool is out of balance. These three elements must be in balance in the organization as well.
