Perez, Kharchenko, Valeriy, Vasant, Pandian, 2020-06-19 Advances in machine learning techniques and ever increasing computing power has helped create a new generation of hardware and software technologies with practical applications for nearly every industry As the progress has in turn excited the interest of venture investors technology firms and a growing number of clients implementing intelligent automation in both physical and information systems has become a must in business Handbook of Research on Smart Technology Models for Business and Industry is an essential reference source that discusses relevant abstract frameworks and the latest experimental research findings in theory mathematical models software applications and prototypes in the area of smart technologies Featuring research on topics such as digital security renewable energy and intelligence management this book is ideally designed for machine learning specialists industrial experts data scientists researchers academicians students and business professionals seeking coverage on current smart technology models *Real-Time Rendering, Fourth Edition* Tomas Akenine-Möller, Eric Haines, Naty Hoffman, 2018-08-06 Thoroughly updated this fourth edition focuses on modern techniques used to generate synthetic three dimensional images in a fraction of a second With the advent of programmable shaders a wide variety of new algorithms have arisen and evolved over the past few years This edition discusses current practical rendering methods used in games and other applications It also presents a solid theoretical framework and relevant mathematics for the field of interactive computer graphics all in an approachable style New to this edition new chapter on VR and AR as well as expanded coverage of Visual Appearance Advanced Shading Global Illumination and Curves and Curved Surfaces *Computational Science and Its Applications - ICCSA 2020* Osvaldo Gervasi, Beniamino Murgante, Sanjay Misra, Chiara Garau, Ivan Blečić, David Taniar, Bernady O. Apduhan, Ana Maria A.C. Rocha, Eufemia Tarantino, Carmelo Maria Torre, Yeliz Karaca, 2020-09-30 The seven volumes LNCS 12249 12255 constitute the refereed proceedings of the 20th International Conference on Computational Science and Its Applications ICCSA 2020 held in Cagliari Italy in July 2020 Due to COVID 19 pandemic the conference was organized in an online event Computational Science is the main pillar of most of the present research industrial and commercial applications and plays a unique role in exploiting ICT innovative technologies The 466 full papers and 32 short papers presented were carefully reviewed and selected from 1450 submissions Apart from the general track ICCSA 2020 also include 52 workshops in various areas of computational sciences ranging from computational science technologies to specific areas of computational sciences such as software engineering security machine learning and artificial intelligence blockchain technologies and of applications in many fields **Quantitative Biology: Dynamics of Living Systems** Noriko Hiroi, Viji M. Draviam, Tetsuya J. Kobayashi, Akira Funahashi, Chun-Biu Li, Douglas B. Murray, Hiroaki Takagi, Ziya Kalay, Rinshi S. Kasai, Jason Edward Shoemaker, Akatsuki Kimura, Naoki A. Irie, 2017-07-24 With the emergence of Systems Biology there is a greater realization that the whole behavior of a living system may not be simply described as the sum of its elements To represent a living system using mathematical principles practical quantities with units are required Quantities are not only

the bridge between mathematical description and biological observations they often stand as essential elements similar to genome information in genetics This important realization has greatly rejuvenated research in the area of Quantitative Biology Because of the increased need for precise quantification a new era of technological development has opened For example spatio temporal high resolution imaging enables us to track single molecule behavior in vivo Clever artificial control of experimental conditions and molecular structures has expanded the variety of quantities that can be directly measured In addition improved computational power and novel algorithms for analyzing theoretical models have made it possible to investigate complex biological phenomena This research topic is organized on two aspects of technological advances which are the backbone of Quantitative Biology i visualization of biomolecules their dynamics and function and ii generic technologies of model optimization and numeric integration We have also included articles highlighting the need for new quantitative approaches to solve some of the long standing cell biology questions In the first section on visualizing biomolecules four cutting edge techniques are presented Ichimura et al provide a review of quantum dots including their basic characteristics and their applications for example single particle tracking Horisawa discusses a quick and stable labeling technique using click chemistry with distinct advantages compared to fluorescent protein tags The relatively small physical size stability of covalent bond and simple metabolic labeling procedures in living cells provides this type of technology a potential to allow long term imaging with least interference to protein function Obien et al review strategies to control microelectrodes for detecting neuronal activity and discuss techniques for higher resolution and quality of recordings using monolithic integration with on chip circuitry Finally the original research article by Amariei et al describes the oscillatory behavior of metabolites in bacteria They describe a new method to visualize the periodic dynamics of metabolites in large scale cultures populations These four articles contribute to the development of quantitative methods visualizing diverse targets proteins electrical signals and metabolites In the second section of the topic we have included articles on the development of computational tools to fully harness the potential of quantitative measurements through either calculation based on specific model or validation of the model itself Kimura et al introduce optimization procedures to search for parameters in a quantitative model that can reproduce experimental data They present four examples transcriptional regulation bacterial chemotaxis morphogenesis of tissues and organs and cell cycle regulation The original research article by Sumiyoshi et al presents a general methodology to accelerate stochastic simulation efforts They introduce a method to achieve 130 times faster computation of stochastic models by applying GPGPU The strength of such accelerated numerical calculation are sometimes underestimated in biology faster simulation enables multiple runs and in turn improved accuracy of numerical calculation which may change the final conclusion of modeling study This also highlights the need to carefully assess simulation results and estimations using computational tools
