Science Experiments Latest Returns:

Hayabusa2 Asteroid Sample Return Mission Masatoshi Hirabayashi, Yuichi Tsuda, 2022-04-14 Hayabusa2 Asteroid Sample Return Mission Technological Innovation and Advances covers the second Japanese asteroid sample return mission. The purpose of the mission is to survey the asteroid Ryugu's surface features, touch down on the asteroid, form an artificial crater by shooting an impactor, and collect sample materials. This book covers these operations along with everything known about key technologies, hardware, and ground systems upon Hayabusa2's return to Earth in 2020. This book is the definitive reference on the mission and provides space and planetary scientists with information on established technologies to further advance the knowledge and technologies in future space exploration missions. 2023 PROSE Awards Winner Finalist. Chemistry, Physics, Astronomy, and Cosmology Association of American Publishers. Broadly and comprehensively covers technologies necessary for space exploration missions. Provides a unique focus on small body exploration missions. Covers landing and impact experiments during the proximity operations of Hayabusa2. Science John Michels, 1891. Chemical News and Journal of Physical Science, 1883. **Proceedings of the American Association for the Advancement of Science** American Association for the Advancement of Science, 1887. **Vision and Voyages for Planetary Science in the Decade 2013-2022** National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Planetary Science Decadal Survey, 2012-01-30. In recent years, planetary science has seen a tremendous growth in new knowledge. Deposits of water ice exist at the Moon's poles. Discoveries on the surface of Mars point to an early warm, wet climate and perhaps conditions under which life could have emerged. Liquid methane rain falls on Saturn's moon Titan, creating rivers, lakes, and geologic landscapes with uncanny resemblances to Earth's. **Vision and Voyages for Planetary Science in the Decade 2013-2022** surveys the current state of knowledge of the solar system and recommends a suite of planetary science flagship missions for the decade 2013-2022 that could provide a steady stream of important new discoveries about the solar system. Research priorities defined in the report were selected through a rigorous review that included input from five expert panels. NASA's highest priority large mission should be the Mars Astrobiology Explorer-Cacher (MAX-C), a mission to Mars that could help determine whether the planet ever supported life and could also help answer questions about its geologic and climatic history. Other projects should include a mission to Jupiter's icy moon Europa and its subsurface ocean and the Uranus Orbiter and Probe mission to investigate that planet's interior structure, atmosphere, and composition. For medium-size missions, **Vision and Voyages for Planetary Science in the Decade 2013-2022** recommends that NASA select two new missions to be included in its New Frontiers program, which explores the solar system with frequent mid-size spacecraft missions. If NASA cannot stay within budget for any of these proposed flagship projects, it should focus on smaller, less expensive missions. First, **Vision and Voyages for Planetary Science in the Decade 2013-2022** suggests that the National Science Foundation expand its funding for existing laboratories and establish new facilities as needed. It

also recommends that the program enlist the participation of international partners This report is a vital resource for government agencies supporting space science the planetary science community and the public **Bulletin** ,1890
