Large Aperture Array Radar Systems for Automotive Applications Fabian Schwartau, 2021-10-18 The radar besides camera and Lidar systems is a core sensor to enable autonomous driving The relatively limited angular resolution is the major drawback of the radar This thesis shows the development of a conceptual future radar system for automotive applications The focus is on providing a large antenna aperture to achieve the required high angular resolution Two genetic algorithms are developed to optimize the antenna array for a good side lobe level while providing high angular resolution Two demonstrators are built to implement certain aspects of the proposed radar system and prove the general concept viable The first demonstrator features a large aperture with a limited side lobe level and is using a modular approach The modules are synchronized with a radio over fiber system The second demonstrator uses the previously proposed antenna array which is implemented with a synthetic aperture radar approach The system s capabilities in a real scenario are demonstrated and the reconstruction of a high resolution three dimensional image from the captured data is shown Das Radar stellt neben Kamera und Lidar Systemen einen zentralen Sensor f r das autonome Fahren dar Dabei ist die relativ geringe Winkelaufl sung der prim re Nachteil des Radars Diese Arbeit zeigt die Entwicklung eines konzeptionellen zuk nftigen Radarsystems f r automobile Anwendungen Der Schwerpunkt liegt auf der Umsetzung einer gro en Antennenapertur um die erforderliche hohe Winkelaufl sung zu erreichen Zwei evolution re Algorithmen werden vorgestellt um das Antennen Array auf einen guten Nebenkeulen Pegel zu optimieren und gleichzeitig eine hohe Winkelaufl sung zu erreichen Zwei Demonstratoren werden gebaut um bestimmte Aspekte des vorgeschlagenen Radarsystems zu implementieren und die Durchf hrbarkeit des allgemeinen Konzepts zu zeigen Der erste Demonstrator weist eine gro e Apertur mit einem begrenzten Nebenkeulen Niveau auf und verwendet einen modularen Ansatz Die Module sind mit einem Radio over Fiber System synchronisiert Der zweite Demonstrator verwendet die zuvor entworfene Antennenanordnung die mit einem Radar mit synthetischer Apertur realisiert wird Die F higkeiten des Systems werden in einem realen Szenario demonstriert und die Rekonstruktion eines hochaufl senden dreidimensionalen Bildes aus den erfassten Daten gezeigt FPGA Algorithms and Applications for the Internet of Things Sharma, Preeti, Nair, Rajit, 2020-03-30 In the research area of computer science practitioners are constantly searching for faster platforms with pertinent results With analytics that span environmental development to computer hardware emulation problem solving algorithms are in high demand Field Programmable Gate Array FPGA is a promising computing platform that can be significantly faster for some applications and can be applied to a variety of fields FPGA Algorithms and Applications for the Internet of Things provides emerging research exploring the theoretical and practical aspects of computable algorithms and applications within robotics and electronics development Featuring coverage on a broad range of topics such as neuroscience bioinformatics and artificial intelligence this book is ideally designed for computer science specialists researchers professors and students seeking current research on cognitive analytics and advanced computing

Design and Implementation of Real-Time Multi-Sensor Vision Systems Vladan Popovic, Kerem Seyid, Ömer Cogal, Abdulkadir Akin, Yusuf Leblebici, 2017-07-03 This book discusses the design of multi camera systems and their application to fields such as the virtual reality gaming film industry medicine automotive industry drones etc The authors cover the basics of image formation algorithms for stitching a panoramic image from multiple cameras and multiple real time hardware system architectures in order to have panoramic videos Several specific applications of multi camera systems are presented such as depth estimation high dynamic range imaging and medical imaging

Introduction to LabVIEW FPGA for RF, Radar, and Electronic Warfare Applications Terry Stratoudakis, 2021-01-31 Real time testing and simulation of open and closed loop radio frequency RF systems for signal generation signal analysis and digital signal processing require deterministic low latency high throughput capabilities afforded by user reconfigurable field programmable gate arrays FPGAs This comprehensive book introduces LabVIEW FPGA provides best practices for multi FPGA solutions and guidance for developing high throughput low latency FPGA based RF systems Written by a recognized expert with a wealth of real world experience in the field this is the first book written on the subject of FPGAs for radar and other RF applications

Embedded Systems Design with Platform FPGAs Ronald Sass, Andrew G. Schmidt, 2010-09-10 Embedded Systems Design with Platform FPGAs introduces professional engineers and students alike to system development using Platform FPGAs The focus is on embedded systems but it also serves as a general guide to building custom computing systems The text describes the fundamental technology in terms of hardware software and a set of principles to guide the development of Platform FPGA systems The goal is to show how to systematically and creatively apply these principles to the construction of application specific embedded system architectures There is a strong focus on using free and open source software to increase productivity Each chapter is organized into two parts The white pages describe concepts principles and general knowledge The gray pages provide a technical rendition of the main issues of the chapter and show the concepts applied in practice This includes step by step details for a specific development board and tool chain so that the reader can carry out the same steps on their own Rather than try to demonstrate the concepts on a broad set of tools and boards the text uses a single set of tools Xilinx Platform Studio Linux and GNU throughout and uses a single developer board Xilinx ML 510 for the examples Explains how to use the Platform FPGA to meet complex design requirements and improve product performance Presents both fundamental concepts together with pragmatic step by step instructions for building a system on a Platform FPGA Includes detailed case studies extended real world examples and lab exercises
