Grade Inflation Valen E. Johnson,2006-05-09 Grade inflation runs rampant at most colleges and universities but faculty and administrators are seemingly unwilling to face the problem This book explains why exposing many of the misconceptions surrounding college grading Based on historical research and the results of a yearlong on line course evaluation experiment conducted at Duke University during the 1998 1999 academic year the effects of student grading on various educational processes and their subsequent impact on student and faculty behavior is examined Principal conclusions of this investigation are that instructors grading practices have a significant influence on end of course teaching evaluations and that student expectations of grading practices play an important role in the courses that students decide to take The latter effect has a serious impact on course enrollments in the natural sciences and mathematics while the combination of both mean that faculty have an incentive to award high grades and students have an incentive to choose courses with faculty who do Grade inflation is the natural consequence of this incentive system Material contained in this book is essential reading for anyone involved in efforts to reform our postsecondary educational system or for those who simply wish to survive and prosper in it Valen Johnson is a Professor of Biostatistics at the University of Michigan Prior to accepting an appointment in Ann Arbor he was a Professor of Statistics and Decision Sciences at Duke University where data for this book was collected He is a Fellow of the American Statistical Association
